## SELECTOOL Master Sharpener Quick-Start Guide

It's easy to get an Exceptional Edge™ with The SELECTOOL Master Sharpener using the right technique. This short guide will get you off to the right start!

You can also visit our tutorial page at [SELECTOOL.COM](http://SELECTOOL.COM)

1. Place the SELECTOOL with either side facing up. The dual sharpening guides should be facing you and extend over the edge of the surface.

Place one hand on the easy-grip handle to hold the SELECTOOL in place, (Keep fingers and hands well away from the sharpening guide.)

2. Position the blade **straight in**, (do not roll or rest it on the guide), and **lean** the tip towards the screw. (This creates leverage and locks the blade with its original angle.) **Very important.**

3. Beginning at the tip, press straight down and sharpen, (put your thumb on the blade if the tip is very dull.) Repeat a little further with every stroke until you are at the base (it's common to see little shavings.) Repeat the same process on the other side until both sides are smooth.

4. Finally turn the SELECTOOL on its side so that the Knife Guide is on top. Insert your blade into the knife guide, angled slightly to the right, and pull toward you. This will remove any burrs from the blade. Repeat the same process on the left side until both sides are very smooth.

For instructional videos on all other objects, check out our support page here:
