Safe Ice Blast Granules are a locally made solution to reduce winter ice buildup in outdoor foot traffic areas, where winter slip hazards are common.

Safe and easy to use, Safe Ice Blast Granules help prevent ice formation on almost any surface. Ideal for busy areas, such as public accessways, paths, carparks or stairways.

**OUR PREMIUM GRANULATED ICE PREVENTION POWDER IS MAKING WINTER SAFER
MPI-C21 APPROVED • SAFE TO USE • NON-DG • BIODEGRADABLE • NZ MADE**

Safe Ice Blast Granules are a locally made solution which reduces the buildup of winter ice in foot traffic areas, where health & safety is a priority.

Safe and easy to use, Safe Ice Blast Granules can be applied by a spreader, or by hand. They help prevent ice formation on almost any surface in areas of concern, such as public accessways, paths, carparks or stairways.

Safer and less corrosive on sensitive areas than salt, the granules will sit on the surface for a number of days (depending on traffic and rain) to effectively prevent surface ice from forming (and creating a public hazard) in the first place.

Safe Ice Blast Granules are a cheaper alternative to other imported products, which are difficult to get and usually sold in much larger quantities.

An ideal solution for use around airport terminals, ski field base buildings, walkways, kindergartens, schools, carparks and many other outdoor areas during our harsh winter months.
