## Green Kiwi Safe Winter Solutions - Ice Blast

## **Ice Blast De-Icing Granules**

Ice Blast Granules are a very effective way to prevent and remove ice build-up on many surfaces - roads, paths, crossings and carparks all benefit from the added safety Ice Blast provides. Made from a combination of safe granules & powders, and with MPI C21 approval, Ice Blast is simply spread on the area you wish to protect and it will remain in place for days to eliminate ice and make your surfaces safer without causing rusting or other issues.

## Ice Blast Concentrated De-Icing Spray (5:1)

Ice Blast De-Icing Spray is a concentrated liquid which can be sprayed onto both horizontal & vertical surfaces to prevent ice build-up or remove existing ice - use this on hand rails, platforms, stairs, ramps & playgrounds as well as roads or paths. Safe to use and with MPI C21 approval, Ice Blast De-Icing Spray is a liquid alternative to granules and as a concentrate it goes a long way. Used ion freezer curtains & pipes, our special additive means it's great on windscreens & mirrors too!

## **Applicator Accessories**

We also provide a range of quality applicators useful for Ice Blast - such as backpack sprayers, trolley sprayers, hand spreaders & backpack spreaders.
