Willow Curve®

The Willow Curve safely combines the known therapeutic benefits of laser, infrared, and diode therapy in one software operated device for pain and rehab. It is designed for temporary muscle and joint pain relief. The device should be placed directly on the skin surface free of lotions or creams and can be used on all joints that fit under the curvature of the device. It is not designed for back applications. It features one button operation and five modes pain conditions. Each therapy session is preprogrammed for 25 minutes, goes through its dynamic therapy cycle and automatically shuts off. The Willow Curve provides unattended therapy for 10 physical applications.
