

The reality is, germs smell...

The smell coming from our we all hate comes from germs. Bacteria, mold and other fungi feed off the nutrients in sweat. They grow and multiply deep in the foam of the pads. Eliminating them is difficult, but the only way to effectively remove the smell.

Serving the Austin area
Sports Equipment Pad Deodorizing and Sanitizing

THE PROCESS: OZONE

Ozone is a naturally occurring state of Oxygen molecules. Environmentally safe, chemical free, and highly effective, ozone has no potentially harmful effects on the skin and disintegrates back to breathable O2 oxygen in a matter of minutes. Bacteria, virus, fungi, and mites that may exist in sports equipment undergo a process called oxidative burst when subjected to high enough concentrations of Ozone.

CLEANSING SERVICES

Men's Lacrosse: Our men's lacrosse cleansing includes all pads (helmet, elbow pads, shoulder pads, gloves), equipment bag, and cleats. We are happy to pickup your pads and drop them off when and where convenient, in time for your next practice or game. Various factors effect how often cleansing is required, but typically 15 to 20 uses will result in a return of the odor. Therefore Aeriform suggests 2 cleansings per month. More information can be found at AeriformSports.com

ALL ABOUT US

Aeriform
[air-uh-fawrm]: adjective;
1) having the form or nature of air; gaseous
2) unreal

Aeriform Sports was founded with a committment to improving the health and wellness of athletes in the Austin area. By eliminating potentially harmful organisms from sports equipment, the Aeriform cleansing process reduces the chances of contracting various skin rashes and diseases.

Through our #GrowtheGame initiative, we intend to provide fundraising opportunities for youth lacrosse programs in the greater Austin area and reduce the barriers for new players to join the sport.

For more information about the #GrowtheGame initiative or other services provided by Aeriform Sports, visit us at AeriformSports.com

Single Pad
