## LA CHAUX-DE-FONDS

Avenue of Americas Intravedere  
Instruction Manual

## Winding

The Gevril Avenue of Americas watch features a Swiss Made automatic mainspring movement which can hold a 40 hour power reserve.

For first time use watch should be wound manually 30 clockwise turns with crown in position A. Close crown when done for water resistance. The watch will then rewind itself automatically while being worn with regular hand movement.

If worn daily the watch can be left overnight without movement and will keep time. If the watch is left more than 30 hours without enough movement the watch will need to be wound manually again as in first time use.

## Setting Time and Date

To set the Time pull crown to position C and turn either direction.

To set the Date first make sure the hour hand isn't between 9 and 1 (setting the date on an automatic watch while the hour hand is between 9 and 1 can break the movement as the gears are already engaged to the date gears). Pull crown to position B and turn clockwise.

After setting the time & date always make sure the crown is closed to ensure water resistance.
