

Gevril Vanderbilt Open Heart

When Alva Vanderbilt hired prominent architect Richard Morris Hunt to build her Fifth Avenue chateau, she was determined to make the home a showplace. It was. The spectacular mansion remained one of Manhattan's most prominent addresses from 1883 until it was ultimately demolished in 1926.

As a tribute to this spectacular residence, Gevril is introducing the equally spectacular Vanderbilt Collection. These elegant 47 mm men's automatic timepieces feature a beautiful skeletonized Swiss automatic movement.

The open-heart design allows you to see the precision movement at work on both the front and back of the watch. The exhibition back is also imprinted with a stylized drawing of the famous Fifth Avenue Vanderbilt mansion.

Like the famous Vanderbilt mansion, Gevril Vanderbilt timepieces were designed to be noticed. The watch is elegant enough for the dressiest occasions, and the big, bold size makes it perfect for casual wear as well. This is a timepiece you'd be proud to wear anywhere.

Instruction Manual

Winding

The GevriL Vanderbilt watch features a Swiss Made automatic mainspring movement which can hold a 40 hour power reserve.

For first time use watch should be wound manually 30 clockwise turns with crown closed in position A. The watch will then rewind itself automatically while being worn with regular hand movement.

If worn daily the watch can be left overnight without movement and will keep time. If the watch is left more than 30 hours without enough movement the watch will need to be wound manually again as in first time use.

Setting Time

To set the Time pull crown to position B and turn either direction.

After setting the time always make sure the crown is closed in position A to ensure water resistance.
