

A distinctive, Swiss-made timepiece is always a sound investment. Artfully reminiscent of the famed New York City skyline, each watch in the Gevril Wall Street Collection commands attention with a stainless steel, architectural design.

The unidirectional rotating bezel frames sapphire-domed, anti-glare crystal. Detailed to perfection, a magnified lens showcases luminous indices and hands on a contrasting dial. Form never suffers to function: each watch is water resistant for up to 200 meters and features a stainless steel bracelet with folding deployment closure.

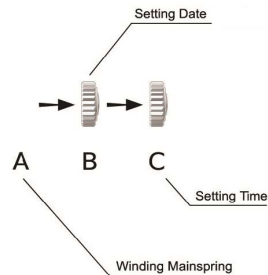

Available in a series of sleek dial colorways, the Wall Street Collection makes a strong statement.

Wall Street Instruction Manual

Winding

In order to wind it first unscrew the crown by turning it counterclockwise until it is released.

This is an automatic winding mechanical watch, using a mainspring as power source. Unscrew the crown to position A Turn it clockwise 30-40 times in position A. Once the mainspring is wound fully, the watch will run for 40 hours.

When wearing the watch, with enough movement it winds the mainspring automatically.

Setting Time and Date

Pull the crown to Position B to set the Date

Pull the crown to Position C to set the Time

Keep crown screwed in to ensure water resistance.
Do not change the time between 9.00 PM - 1.00 AM.
