

Euro line DWC-11-E Wheel balancer

Jema Autolifte A/S
we are here to surprise!

Jema Autolifte Euro line Wheel balancer

DWC-11-E is a full automatic wheel balancer, with camera and laser pointer, perfect for cars and vans.

DWC-11-E has the following functions, Air pressure quick clamping, automatic positioning lock, laser alignment, camera, printer, ultrasonic non-contact width meter, voice synthesizer ALU programs, several different ALU programs for motorcycles program "hidden weight", optimization and Touch LCD screen.

DWC-11-E produced in Europe and is of course CE approved.

Technical specifications

- Noise level 65db
- 220V power supply
- Motor power 80W
- Max. Rim diameter 10" - 30"
- Max. Rim width 2" - 15"
- Max. Tyre diameter 45"
- Max. Wheel weight 70kg.
- Balancing accuracy +/- 0,9gr.
- Wheel balancer weight 150kg.
- CE Approved

Camera in the tower

The wheel balancer DWC-11-E is equipped with a patented system with automatic wheel parameters IN-PUT based on the camera in the tower.

Quicknut

The DWC-11-E is equipped with an air pressure quicknut and therefore significantly shortens your wheel assembly time and eliminates the risk of eccentric wheel mounting. The quick nut is controlled by a foot pedal.

Printer

The DWC-11-E is equipped with a printer so that you as a user can show the customer the result of the balancing to the customer.

High quality

With automatic safety hood, calibration menu, voice synthesizer, laser adjustment, all programs, automatic positioning lock, contactless wheel parameter measurement and optimization menu, the DWC-11-E is the ideal choice for the discerning and quality-conscious user.

With the DWC-11-E, you get a top quality balancing device for the professional car workshop, which ensures a quick and precise balancing of the wheels every time. The DWC-11-E is produced in Europe and of course CE approved.
