WHAT ARE PROBIOTICS?
Probiotics, defined internationally by the Food and Agricultural Organization (FAO) and the World Health Organization (WHO) are: “live microorganisms that, when administered in adequate amounts, confer a health benefit on the host”.1 The Food and Drug Administration (FDA) classifies probiotics for human consumption as “live biotherapeutics”.2–3

WHY DO WE NEED PROBIOTICS?
Probiotics normally live in a healthy balance with other bacteria in our intestine. Under certain circumstances however this balance may be disrupted by physical stress, poor nutrition, unsanitary environment, aging, traveling, etc. Probiotics offer support for overall digestive health.† This includes supporting regularity of bowel movements and consistency of stool, as well as supporting digestive balance during travel.† The production and absorption of certain nutrients in the colon are also enhanced by probiotics. For example, a lower pH in the colon can enhance the absorption of calcium and magnesium.4–6

HOW DO WE KNOW PROBIOTICS ARE GOOD FOR US?
Numerous clinical studies in various parts of the world have reported the roles probiotics can play in keeping us healthy. Some probiotics have been shown to help us with digestive issues such as occasional bloating, gassiness, abdominal discomfort, diarrhea and constipation.† Some probiotics have been reported to support immune system functions.7 The scientific literature has shown probiotics to be helpful with various health parameters that contribute to overall health.

MICROORGANISMS USED AS PROBIOTICS:
Organisms and species commonly used as probiotics are:

1. Lactobacillus species
2. Bifidobacterium species
3. Certain Bacillus species
4. Non-bacterial organisms like Saccharomyces (Yeast)

To qualify as a probiotic, the organism must be non-pathogenic, demonstrate ability to survive stomach acidic environment, resist effect of bile salts, and have the ability to compete successfully against “resident” gut organisms for an appreciable length of time.

PROBIOTIC MECHANISM OF ACTION:
Suggested mechanisms of action for probiotics include the following:

1. Crowding-out of “resident” organisms and preventing them from adhering to gut
2. Production of molecules (bacteriocins) that are capable of destroying other organisms
3. Production of short chain fatty acids (SCFAs) as metabolites from the fermentation dietary fiber or resistant starch; these SCFAs can lower intestinal lumen pH to levels harmful to other organisms

HOW TO SELECT THE RIGHT PROBIOTIC?
To select the probiotic that is the best for each individual, there are a few tips to keep in mind.

- **Purchase your probiotic from a well-known brand that you know and trust.** A trusted brand will disclose the probiotic strain used in the product formulation, as well as providing a website and toll-free number on the label to address consumer questions.
- **Read product label to assure it is describing the health benefit you are seeking.**
- **Check the label for potency measured as Colony Forming Units (CFU) through product shelf life rather than at time of manufacture.**
- **Confirm with brand or manufacturer that the CFUs in the product for purchase are supported by clinical research.** Inquire to see if the study has been published, and in which peer-reviewed journal.

**NATURE MADE® PROBIOTIC PRODUCTS**

Most Nature Made Probiotic products contain the Lactobacillus organism (Lactobacillus rhamnosus GG), or the Bifidobacterium organism (Bifidobacterium lactis HN019™) or a combination of them, targeting digestive health. While the L. rhamnosus GG helps support a healthy balance of intestinal microflora, the B. lactis SHN 019 supports regularity. These claims are all supported by well-designed and executed human clinical studies.

**Nature Made Advanced Dual Action** provides two high quality probiotics:

1. Lactobacillus rhamnosus GG to naturally help relieve occasional gas, bloating, abdominal discomfort, and diarrhea.

2. Bifidobacterium lactis HN019™ to naturally help relieve occasional constipation and irregularity.

**Nature Made Daily Balance** has Lactobacillus rhamnosus GG, which naturally helps relieve occasional gas, bloating, abdominal discomfort, and diarrhea.

**Nature Made Ultra Strength 12 Strain** provides over 30 billion CFU of a probiotic blend totaling 12 strains of Lactobacilli and Bifidobacteria species to which naturally helps relieve occasional gas, bloating, constipation, abdominal discomfort, and irregularity.

**Nature Made Probiotic Gummies** provide Bacillus coagulans IS-2 probiotics to help support digestive health in a delicious gummy form.

**ABOUT Nature Made®**

For 45 years, Nature Made has been a trusted leader in the wellness industry, providing high quality vitamin, mineral and herbal supplements. Nature Made is the national supplement brand with the most products carrying the United States Pharmacopeia (USP) mark—USP mark verifies that products meet stringent quality criteria for purity and potency. It is also the #1 Pharmacist Recommended Supplement Brand in 9 Categories.
