HERE'S THE DIRT ON COMMERCIAL COMPOSTING

GOOD FOR THE EARTH

According to the Biodegradable Products Institute, "composting is a natural process that turns organic materials into a valuable soil amendment."

Composting plays a unique and vital role in sustainability efforts. It diverts organic waste away from landfills and turns them into a product that can help the environment.

BENEFITS OF COMPOST

- ◆ Improves soil and water quality
- ◆ Can improve crop yields
- ◆ Can replace chemical fertilizers
- ◆ Reduces methane emissions in the atmosphere
- ◆ Helps aid reforestation, wetlands restoration, and habitat revitalization
- ◆ Provides carbon sequestration.

TYPES OF COMPOSTING

Commercial composting facilities accelerate the breakdown of organic materials, like those in our commercially compostable packaging.

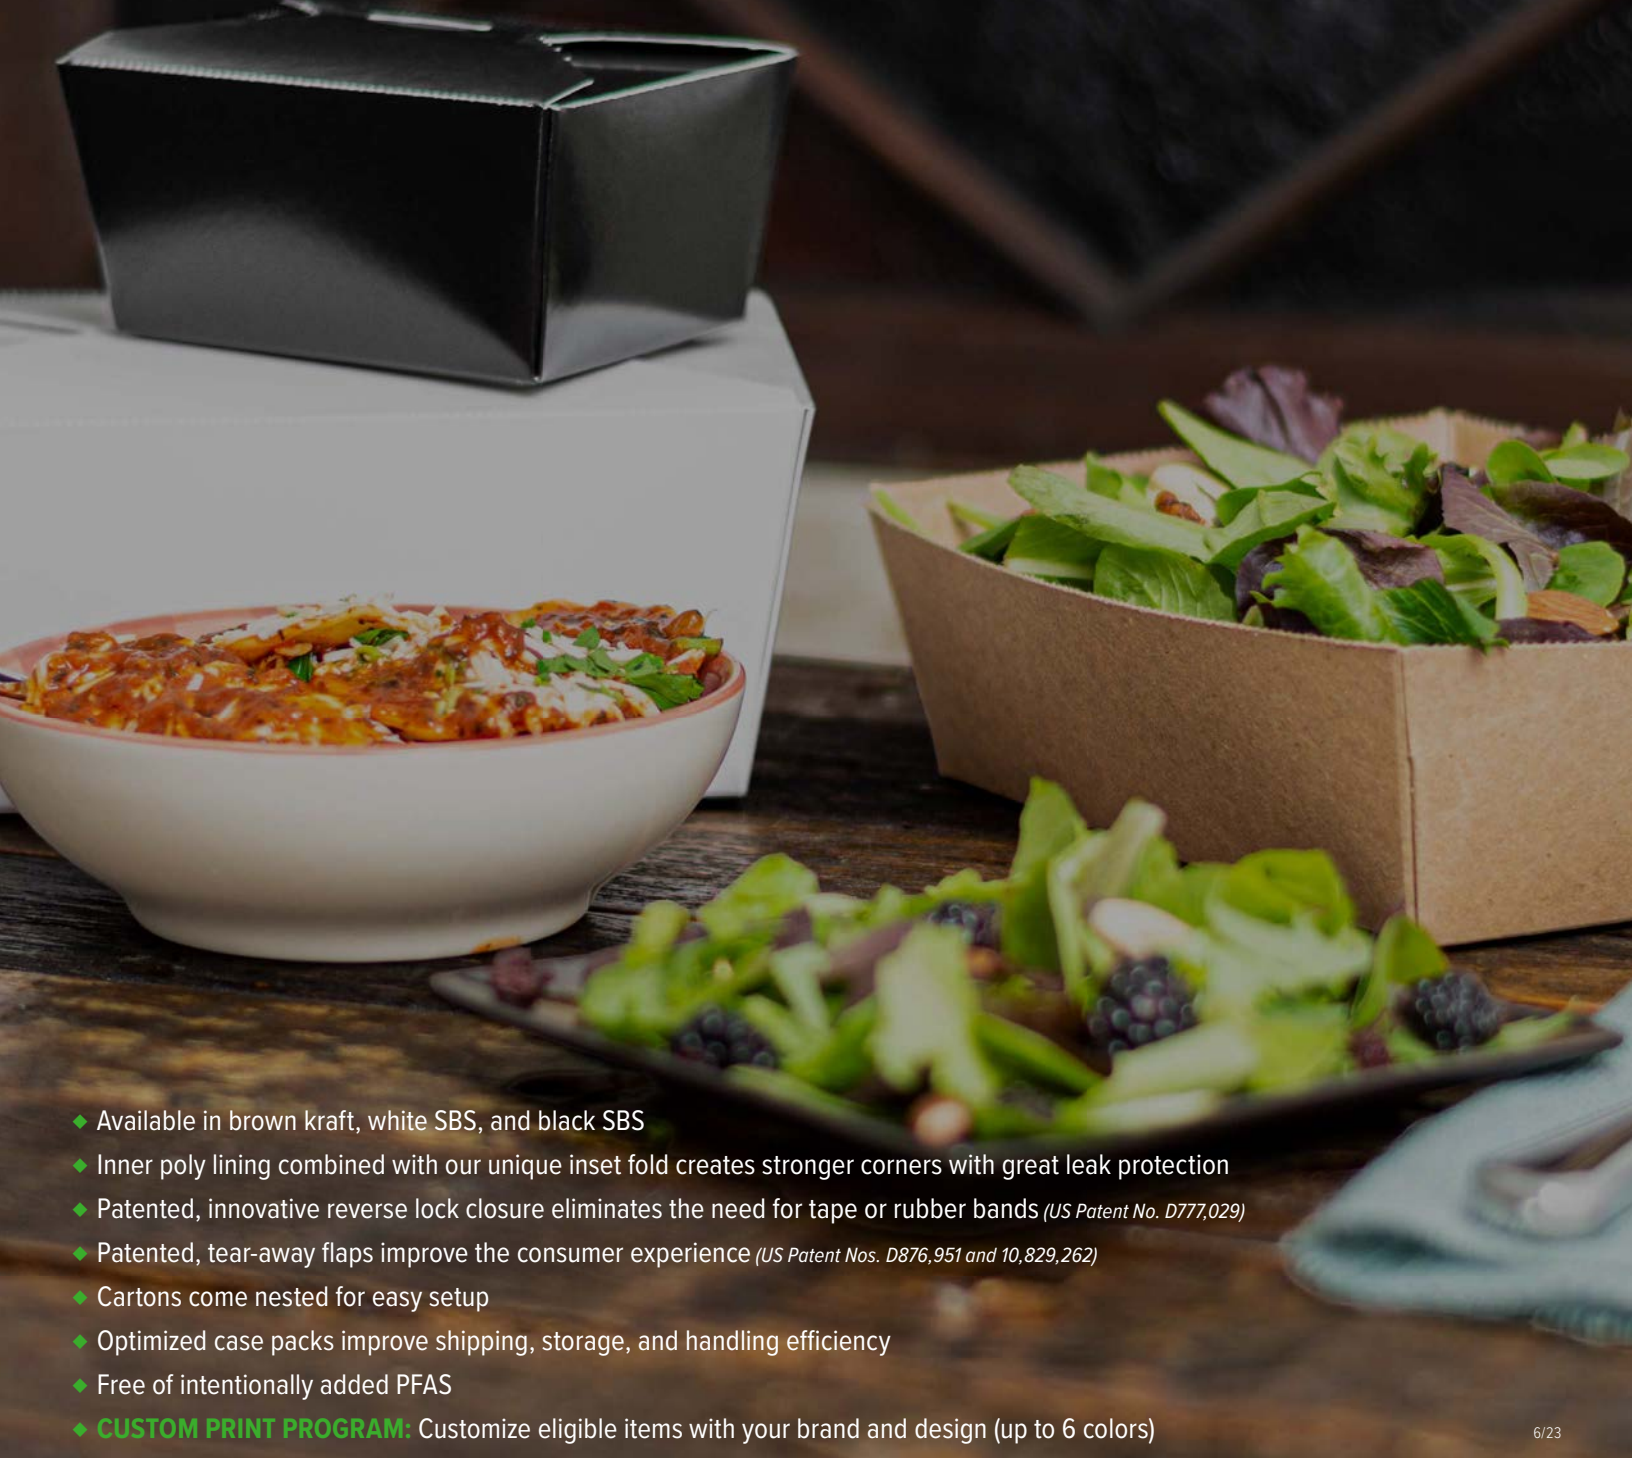

The two most common types of commercial composting today are windrow and Aerated Static Pile, according to BPI. A third method uses in-vessel, positive aeration, membrane laminate technology.
