Included Parts

A
Left Side

B
Right Side

C
Back

D
Platform

E
Ladder

F
Dowel

G
Guard Plate

Recommended

A rubber mallet or a hammer used with a cutting board can help align pieces.

Rubber Mallet
(not included)

OR

Hammer with scrap wood
or cutting board (not included)

Begin Assembly

1

Place Left Side **A** on carpeted floor with slots facing up. Place tabs of Back **C** into corresponding slots and **use your weight to pop tabs into place**. Then stand up the parts and push down on Back **C** to lock into place.

2

Place Side **B** on carpet and insert Back **C** tabs into slots. Stand up the assembly and push down on Back **C** to lock into place. **Back will be below-flush with Sides when fully locked.**

- 3** Spread Sides apart to insert tabs on Platform **D** into slots on Back **C** **at desired height**. Push Sides together to catch tabs on Platform **D** in slots on Sides.

- *** These are general recommendations. Observe how your child uses their tower and adjust the height to meet their needs.

- 4** Spread Sides just enough to insert Ladder **E**. Push Sides together, popping tabs on Ladder **E** into slots on Sides. **Ensure Ladder is flush** (no gaps) with Sides before moving on to the next step.

- 5** Doing one side at a time, slowly step on Ladder **E** to lock it into place. **Ladder should be almost flush with floor when fully locked.**

- 6** Insert Guard Plate **G** for children under 32" tall. Then slide Dowel **F** into hole from side. **Twist Dowel F while pushing down** to lock into place.

Please note that **the dowel must be securely locked into place if you are using the Guard Plate** or if you are concerned about your child falling backward during use.

For Disassembly

- 1 Twist while pulling up on Dowel **F** to pop it out of place. Slide Dowel **F** out of holes to remove. Flex Sides **A** & **B** apart slightly to remove Guardplate **G**.

- 2 Turn the Tower upside down. Push down on the frame of Ladder **E** to release it. Gently flex Sides apart to remove Ladder **E** and Platform **D**.

- 3 With a book under each Side, place front legs of tower against a wall. Doing one side at a time, push near the middle of Back **C** with your knees while using your weight to push Back down to unlock and release. **Ensure tabs are fully released before popping Sides off Back.**

Safety Information

The Toddler Tower has been designed and refined to maximize safety. Below are some safety tips and recommendations you should consider:

Children should never use the tower without adult supervision. This will enable you to step in if your child is misusing the Toddler Tower.

Do not allow children to climb on the sides, intentionally rock the tower, or climb up through the top onto other surfaces.

As a general rule, if your child's belly button is above the top of the tower's sides, you should lower the standing platform.

On the highest setting, we encourage you to **use the guard plate along with the dowel**. The dowel can be removed when you are no longer concerned that your child will fall backwards out of the tower during use.

The tower should be used on a firm and flat surface. Avoid using the tower on carpet.
