

Nano Glass - Foot Buffer

Unleash silky, smooth skin from heel to toe! As much as we enjoy a good pampering pedicure, how many of us get around to it?

Now, it's time to never feel embarrassed to say "I need a pedicure" before revealing your feet to the world again.

Our Nano Glass Foot File exfoliates, buffs and removes calluses and dry keratin from the skin's surface without over-filing your healthy skin. It also allows you to manage your own self-care to achieve instantly better results at home.

Cracked heels appear due to dry calluses building up, causing them to crack, creating room for bacteria which leads to infection. Therefore, spending time and money at a salon is an expensive and time-consuming event that can be managed at home.

Delightfully compact, slim and sleek – say no to the 'cheese graters' or harsh emery boards full of bacteria in your toiletry bag.

How to use me:

- Use on wet or dry skin; suitable in the shower and on the go when you spot a dry patch!
- Buff in a circular motion and watch the dry keratin fall off
- Rinse the foot file with water and dry fully before storing
- Wash excess and moisturise feet after use
