

Will the Engine fit on my bicycle?

This is a common question that we receive which prompted us to create this specification guideline which can easily allow you to check if the engine will fit on your bicycle.

Firstly, cut out a template on a piece of cardboard to the size given below:

After its been cut out take this template and fit it into your bicycles frame as illustrated below be sure to keep the bottom section at 180 degrees (straight line)

If the template fits as illustrated above, then the engine should fit in your bicycle.
