SECTION III – HAZARDS IDENTIFICATION

Liferaft contains a steel or aluminum cylinder of gas under pressure which may discharge or rupture under extreme temperatures. Liferaft contains pyrotechnic signaling devices (flares) that are explosive. Flares will burn with intense heat when exposed to fire. Keep away from flame or flame producing sources.

SECTION IV – FIRST AID MEASURES

SKIN CONTACT	N/A
EYE CONTACT	N/A
INHALATION	N/A
INGESTION	N/A

In general, liferafts present no hazards that would require first aid measures.

SECTION V – FIRE FIGHTING MEASURES

Flammable: <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes - identify under which conditions	Liferaft contains pyrotechnic signaling devices (flares) that are explosive. Flares will burn with intense heat when exposed to fire.
Means of Extinction	Large volumes of water
Special Fire Fighting Procedures:	Pyrotechnic signaling device (flares) may include material that contains its own oxygen to maintain burning. Do not try to smother or use dry chemical.

SECTION VI – ACCIDENTAL RELEASE MEASURES

Leak and Spill Procedures	Hazardous materials are contained in sealed units within packed liferaft. Spills should pose no threat if the sealed units are not breached. If compressed gas cylinder ruptures, ventilate area. If pyrotechnic signaling device ruptures, material spilled from unit should be swept away and burned by trained personnel. Ignition sources must be avoided. Handle materials with care.
----------------------------------	--

SECTION VII - HANDLING AND STORAGE

Handling Procedures and Equipment	Do not drop the packed liferaft. Do not pull the inflation lanyard (painter line) on the raft. Only lift the packed raft by its handles if packed in a fabric valise. If raft is packed in a hard container, lift from bottom. Opening the raft valise or hard container may cause the raft to inflate. Liferaft can cause injury if inflated close to people or in a confined area. The liferaft's compressed gas cylinder is equipped with a pressure relief device. The device will vent gas from the cylinder if stored at temperatures above 130°F. The raft may partially or fully inflate if the pressure relief device activates.
Storage Requirements	These units should be stored in a cool, dry area away from danger of sparks, heat or flame.
