- Outstanding Washing Durability !
- Soft and Flexible than others !
- Much less smells !
- Saving Space for Stock !

DILUTION GUIDE

T-PRT-2S 1L + Water 1L = Sublimation Coating Liquid for Cotton 2L

STEPS

1. Dilute the liquid with purified water as the ratio above.
2. Apply the diluted liquid on cotton T-shirts.
 - * You are recommended to use MISTER-T1 (Automatic Pretreat Spray Machine) for consistent and even coating which will provide you same color gamut for every sample.
 - * You may use hand spray or rollers if necessary.
3. Make it fully soaked. (Recommendable to spray about 30ml per shirts (40cm x 50cm))
4. Heat fixation with heat press about 200°C for 30sec.
5. Please put transfer paper printed by sublimation ink.
6. Heat press it with 200°C for 30sec.

** Please make sure to cover the shirts with Teflon Sheet or Tissue Paper not to have yellowing.

** The fabric is somewhat stiff right after transfer. When you wash it, it can be returned as soft and flexible as before. Besides, if you put steam iron, it can be soft as well.

** Please understand after washing there is slight color fading.

SIZE

- Packing in 1L, 20L (5 Gallon), 200L (50 Gallon)
