

HIX CORPORATION

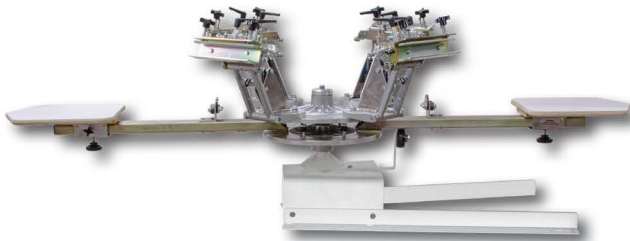

HIX Premier Screen Printers

HIX Premier Screen Printers

For almost 60 years HIX® has been manufacturing the highest quality, state-of-the-art manual screen-printing equipment for anyone from the small start-up shop to the fully equipped professional that's serious about their business making a profit in the textile graphics industry without them having to invest in a high-priced automatic printer shop.

HIX® Premier® printers are the evolution of decades of engineering expertise. Constructed with a heavy-duty steel base, the HIX in-house cast and machined aluminum components provide a level of quality unmatched by any welded steel printer

Features:

- True all-heads-down printer. The industry standard for nearly 60 years.
- All machined aluminum components are cast in our own HIX foundry.
- No welds are used in the construction of the heavy duty central print head and arm carousels.
- Precise, exact angles between the color heads and print arms.
- One time registration - no corrective adjustments are needed during the print-run.
- Smooth and accurate micro-registration allows for precise screen adjustments. Ratchet handles are used to lock the screens firmly in position.
- Gas shocks are used instead of the traditional springs to provide a smooth and sequential lift of the screens, avoiding a sudden uplift of the screens after each print stroke.
- With the heads in the up-position the screens remain near-horizontal. This makes them easy to grab, the squeegees remain in place, and ink does not migrate inside the screen.
- Upgradeable from a bench top 4/2 printer to a floor standing rotary printer with 4/4, 6/4 and 6/6 configurations.
- A variety of optional rubber-topped aluminum shirt-boards and sleeve shirt-boards are available that are resistant to flash curing.
