

SC-5040

Waterbase and Plastisol Ink Wash

Product Description:

SC-5040 is a highly effective biodegradable, odorless screen cleaner for removing all types of plastisol and water based inks from screens. *This high loading product may also be used in chemical recirculation systems and will last longer than other cheaper products by allowing the plastisol ink to settle to the bottom of the tank not allowing the ink to be reintroduced onto the screen.* This product complies with all SCAQM regulations and does not contain any SARA 131 reportable products!

Directions

For Complete reclaim:

Simply spray on screen, scrub image area with a soft pad then pressure wash out with a high-pressure sprayer, remove emulsion with Image Technology 600C or 675 Emulsion Remover, then re-apply SC-5040 to any residual ink stains and pressure washout to remove. This product contains a degreaser.

For Saved screens:

Apply product using a sprayer or towel, lightly scrub with a soft brush and either let air dry or wipe with a clean towel.

For Chemical recirculation systems:

Fill unit with SC-5040, after use allow product to settle for separation of inks and chemicals, remove sludge and top off with fresh chemical. This product may be reused after settling of sludge in a holding container.

These directions are supplemental and are to be used in conjunction with the appropriate MSDS sheet for this product
