

FHW - resin/wax colour printer ribbon

Product information

Printing with the FHW resin/wax colour ribbons is done at normal heat. In general, printing with FHW resin-wax ribbons offers a broad field of applications for almost all materials requiring medium to low durability.

The FHW colour ribbons, based on a mix of resin and wax are ideal for printing onto matte synthetic films and laminated or coated papers, matte polyesters, polypropylene, Polyolefins (heat-shrink conduits), polyethylene, vinyl (PVC) and Polyamide.

Furthermore, smooth and shiny synthetic film surfaces can be printed just like with the FH colour ribbons. But we recommend FH+ or FH++ colour ribbons in this case for higher durability.

PU pcs.: 300
