PRK 5

Retro-reflective photoelectric sensors for semi-transparent media

0.02 ... 6.0 m

- Polarized retro-reflective photoelectric sensor using visible red light
- Easy adjustment via teach button
- Active suppression of extraneous light A²LS
- Fast alignment through brightVision®
- Simple mounting with integrated M3 metal threaded sleeves
- Compact installation possible due to cable outlet at the rear or bottom
- Robust plastic housing acc. to IP 67 for industrial application
- Full control through green and yellow indicator LEDs
- Complementary outputs for light/dark switching

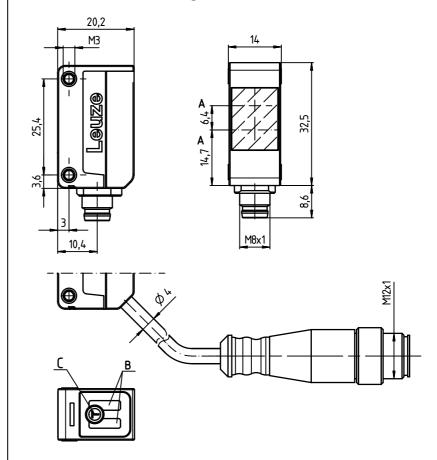

Accessories:

(available separately)

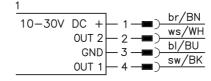

- Mounting systems (BTU 200 ..., BT 200..., BT 205M)
- M12 connectors (KD ...)
- Ready-made cables (K-D ...)
- Reflectors
- Reflective tape

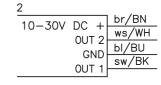

Dimensioned drawing

- A Optical axes
- **B** Indicator diode
- C Teach button

Remarks

Operate in accordance with intended use!

- This product is not a safety sensor and is not intended as personnel protection.
- The product may only be put into operation by competent persons.
- ♥ Only use the product in accordance with the intended use.

Part no.

Designation

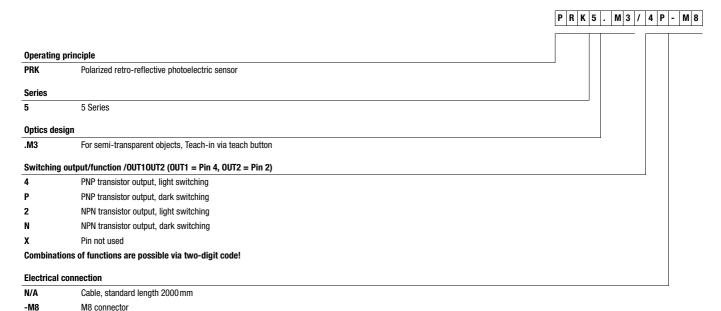

PRK 5 Retro-reflective photoelectric sensors for semi-transparent media

Order guide

The sensors listed here are preferred types; current information at www.leuze.com.

	With M8 connector	Pin 4: PNP light switching, pin 2: PNP dark switching	PRK5.M3/4P-M8	50128200
	WITH MO COMMECTOR	Pin 4: NPN light switching, pin 2: NPN dark switching	PRK5.M3/2N-M8	50128202
W	With cable, 2m	Pin 4: PNP light switching, pin 2: PNP dark switching	PRK5.M3/4P	50128201
	with cable, 2111	Pin 4: NPN light switching, pin 2: NPN dark switching	PRK5.M3/2N	50128203

Part number code

Sensor adjustment (teach) via teach button

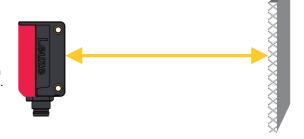

The sensor is factory-adjusted for maximum operating range.

Recommendation: teach only if the desired objects are not reliably detected.

Prior to teaching:

Clear the light path to the reflector!

The device setting is stored in a fail-safe way. A reconfiguration following voltage interruption or switch-off is thus not required.

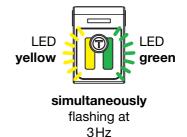

Teaching for increased sensor sensitivity

- Press teach button until both LEDs flash simultaneously.
- Release teach button.
- Ready.

After the teaching for increased sensor sensitivity, the sensor switches when about 25% of the light beam are covered by the object.

PRK 5

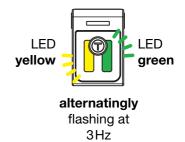

Standard teaching for average sensor sensitivity

- Press teach button until both LEDs flash alternatingly.
- Release teach button.
- Ready.

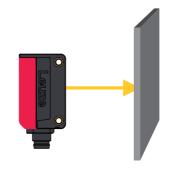

After the standard teaching, the sensor switches when half of the light beam is covered by the object.

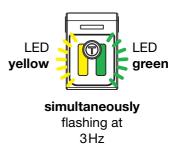

Teaching for maximum operating range (factory setting at delivery)

- Prior to teaching: **Cover** the light path to the reflector!
- Procedure as for Teaching for increased sensor sensitivity.

Adjusting the switching behavior of the switching output - light/dark switching

This function permits inversion of the sensors' switching logic.

• Press the teach button until only the green LED flashes. The yellow LED then shows the inverted switching logic:

ON

= switching outputs light switching (in the case of complementary sensors, Q1 (pin 4) light switching, Q2 (pin 2) dark switching), this means output active when object is

detected.

OFF

= switching outputs dark switching (in the case of complementary sensors, Q1 (pin 4) dark switching, Q2 (pin 2) light switching), this means output inactive when object is

detected.

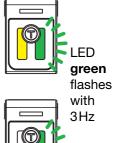

- Release teach button.
- Ready.

LED yellow

ON = light switching

OFF = dark switching
