

Rear wheel installation

First identify the wheel with the square through hole in the center of the hub this wheel goes on the right-hand and the wheel with the round fitting in the center of the hub is the left wheel, remove both lug bolts. We recommend installing the right-hand wheel first and then the left as the left wheel can be installed either way, it is important to match the tread direction. Secure both with the 8mm lug bolts and aluminum cap.

Fender installation

The 2022 Trike fenders may cause difficulty installing. Here is what we suggest.

If the holes do not line up correctly you will need to adjust one mounting bracket. The mounting brackets are located inside the rear basket. You will need to loosen one of the brackets and line up the fender holes, then tighten the bracket with fender holes a lined.
