

Damp Away

Damp-proofing Cream

Damp Away Cream is a damp-proofing cream that is injected into walls for the treatment of rising damp. It is supplied in 310ml cartridges which can be used in a standard heavy duty caulking gun.

Why use **Damp Away Cream**:

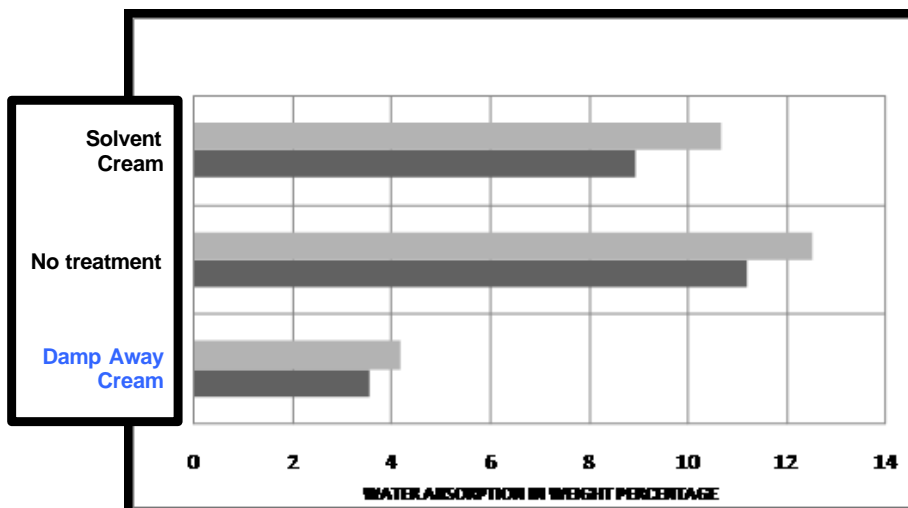

- Up to three times faster than liquid based systems to install
- Advanced dispersion qualities help the cream absorb into masonry
- Solvent-free cream formulation
- Low hazard, non-flammable and virtually no odour

How to use **Damp Away Cream**:

The cream can be applied with a standard, heavy duty caulking gun. When introduced into 12mm bore holes **Damp Away Cream** permeates the wall, creating a water proof layer which prevents moisture from rising up through the masonry.

Comparing **Damp Away Cream** to solvent-based creams:

Water uptake graph

Instructions for **Damp Away Cream**:

1. Drill bore holes 120mm apart along the mortar course at approx. 150mm above ground level. Use table below for guidance on drill hole depth:

Wall Thickness	4 1/2" (110mm)	9" (220mm)	13 1/2" (330mm)	18" (440mm)
Borehole Depth	100mm	190mm	310mm	430mm
Hole Centres	120mm	120mm	120mm	120mm

2. Insert and fit cartridge into applicator gun
3. Remove cartridge tip and affix nozzle to open end
4. Squeeze handle until nozzle has filled with cream
5. Fully insert cartridge nozzle into drill hole, and slowly release cream into the length of the drill hole while drawing nozzle back out of the hole. Repeat for all holes
6. Repoint over drill holes

Coverage of **Damp Away Cream**:

One 310ml cartridge will treat 2.0 linear metres of 4.5 inch wall:

		Wall Thickness			
		4 1/2" (110mm)	9" (220mm)	13 1/2" (330mm)	18" (440mm)
Length of Wall	10m	1.5	3.0	5.1	7.0
	20m	3.0	6.0	10.2	13.0
	30m	4.6	9.0	15.3	21.0
	40m	6.1	12.0	20.4	28.0

Health and Safety

Damp Away Cream is non-hazardous, and does not have any hazard classification. For more information see the Material Safety Datasheet.
