New 14 Inch Brake Drums Are Here!

We’ve spent the past few years in a constant search for good brake drums, so we are extremely excited to be able to offer a New 14" brake drum that is very close to the original. The New drums include the original inspection hole to allow you to check the condition of your brake shoes without even taking a lug nut off. Differing from the original three-piece drums, the New drums are a one-piece casting that has been machined and is nearly ready to bolt on. However, when each drum is assembled with a hub, this will slightly change the shape of the brake drum. After mating the New drum to your hub, the brake surface will need trued, a simple job for any shop with a brake lathe. Please be sure to contact us with any technical questions you may have about this process.

There are 2 options you have when purchasing New brake drums from Vintage Power Wagons:

Option 1: You may send your hubs to us and we will take care of assembly and machining for an additional shop labor fee. Keep in mind that you will have to pay shipping both ways when using this option.

Option 2: We can send you the drums and you or your machine shop can assemble and turn each married drum and hub.

NOTE: It is very important that each drum and hub set is completely assembled before machining or you will have minimal results from the machining process and may end up with shaky brakes as well as other long term issues.

New 14” Brake Drum

New 1 Ton Flat Fender Power Wagon Non-Winch Lower Grille Guard

These new grilles were produced at a local metal fabrication shop that uses a CAD process. The outer frame was laser notched to give exact spacing for the bars.

Our once plentiful stock of used non-winch lower grille sections has been depleted, but we are lucky to have a local manufacturer working with us on producing these new lower Flat Fender Power Wagon grilles. We are pleased to announce that these are now available, but quantities are limited.

**New Dodge Truck Serial Numbers 1917-1980 - A comprehensive guide to Dodge, Plymouth, Fargo & DeSoto Trucks**  
by Eric Bannerman  
This book is an essential resource for all classic truck enthusiasts. It provides accurate information about locating and interpreting serial numbers (VINs) used on Dodge, Dodge Brothers, Graham Brothers, Plymouth, Fargo and DeSoto trucks built from 1917 to 1980 in the United States and Canada, also from 1953 to 1963 in Australia. The material was compiled from hundreds of factory books and verified by checking thousands of trucks. You will find straightforward information about the year, models, engine sizes and wheel base options for each serial number. The pictures of tags and frame number locations along with the tables, and explanations lay out a clear path to finding and decoding the serial number for your truck. Whether you are searching for information to identify a new purchase or verifying the year and model of a restoration project, this book gives you the tools you need!

**New Flat Fender Power Wagon Radiator - Economy & Performance Design**

This economy design is the personal favorite of the guys who are looking to get the most performance out of their build and it has brass inlet/outlet necks that can be customized in locations to support your engine choice.

This economy version will fit perfectly in your original support and you won’t notice the slim design or longer fill neck once you have it mounted behind the radiator shell. This version allows for better cooling as it has a larger core and a more efficient tank flow design.

Vehicle Type: ALL

This snatch block greatly increases the versatility of any vehicle mounted or portable winch, enabling you to retrieve loads that are double the winch’s normal capacity. This will also allow you to winch from varying angles when pulling straight ahead isn’t the best option or options are limited to awkward angles. Manufactured from high quality components, ARB snatch blocks feature side plates that sit snug against the pulley, eliminating the possibility of the winch cable becoming trapped between the pulley and the side plates. The groove of the pulley tapers down to the center allowing for a variety of cable sizes (1/4”-1/2”) to be used and ensures the cable is seated securely minimizing lateral movement.

**Features:**
- Works with steel or synthetic winch lines
- 6mm cold rolled steel side plates
- Light weight design
- Doubles the capacity of your winch
- Engineered tough for serious recovery
- 38,500lb (17,500kg) breaking strength
- Vehicle recovery booklet enclosed

Quick Tip 1: Engine Information

I would like to order the correct parts for rebuilding my engine. How do I determine the cubic inch displacement (CID) of my flathead 6?

Here's a simple chart we've made to help you with determining cubic inch displacement.

Piston Displacement 218 cu. in. 230 cu. in. 237 cu. in. 251 cu. in.

Head Length 23 1/4 +/- 23 1/4 +/- 25 1/4 +/- 25 1/4 +/

Cylinder Bore 3.25" 3.25" 3.4375" 3.4375"

Stroke 4 3/8" 4 5/8" 4 1/4" 4 1/2"

Rod Length (Center to Center) 7 15/16" 7 13/16" 8" 7 7/8"

Repeat this operation until all bolts or nuts are tight. Use a torque wrench and tighten bolts to 65-70 foot-pounds and stud nuts to 52-57 foot-pounds. Just a note on machine work when either rebuilding or performing a valve job: Make sure you check cylinder head for flatness. Have the head planed if necessary. It’s also a good idea to have the head magnafuxed for stress cracks. Check and clean spark plug holes and watch for cross threaded holes. When installing New spark plugs, always use anti-seize on the threads and hand tighten with a wrench to snug. Do not torque over to 32 foot-pounds.

Quick Tip 2: Replacing an Oil Pump
Any special procedures required for replacing my oil pump?
It's very important to prime the oil pump prior to installation. Before you start the engine, remove the oil pump and completely submerge oil pump in clean oil. Turn the shaft by hand until there are no more air bubbles. Reinstall the pump with a New gasket. Fill the engine with fresh oil. Disconnect the coil wire and crank the engine until you have pressure on the gauge. Reinstall the coil wire and start the engine.

**Quick Tip 3: Engine Oil Service Recommendations**

Oil is the lifeblood of your engine, so using the correct type & viscosity is just as important as changing it regularly. Back when your Power Wagon was new, it would have used SAE 30W non detergent. Oil technology has changed since then. For mild operating temperatures we’d recommend using a 10W30. Keep in mind that no 2 flat head six cylinder engines are the same and yours may hold more consistent oil pressure with a particular viscosity or even brand of oil. While you may be tempted to use Newer synthetic type or synthetic blend oils, we don’t recommend doing so. Synthetic oils are generally considered good for engines, but the seals, gaskets and tolerances in the old flat head six just aren’t right or tight enough for synthetic oils and you may experience more leaks than normal.

**Quick Tip 4: Sealing a Water Pump**

Does my water pump have to be sealed before installation?

Yes. When you are ready to install the water pump, first remove the back cover plate of the water pump. Using Aviation Form-A-Gasket Sealant Liquid, apply sealant to the surfaces of the water pump, back cover plate and mounting bolts. Reinstall the back cover plate and tighten correct length bolts until snug. Be careful that you don’t over torque the bolts!

### Quick Tip 5: Thermostat installation

**What do I need to know when installing a new thermostat?**

In some cases you may want to drill a 1/32” hole in the top plunger (the piece that opens) of the thermostat towards the outer lip. This allows for circulation before the thermostat opens, reducing deposits in your cooling system and reducing the possibility of pressure build-up. This also helps bleed air from the system, reducing the chance of air pockets which can create hot spots in the engine. Don’t forget to replace the thermostat housing gasket.

Quick Tip 6: Flathead 6 Ignition Distributors
Can I interchange ignition distributors without a problem?
Yes, distributors are interchangeable between same length engine blocks but are not interchangeable between different length blocks (e.g., 230 vs. 251). Longer block engine (237, 251, 265) distributors have a drive tang that is approximately 1/4" longer than shorter block engine distributors (201, 218, 230). If you happen to be converting your M-37 truck to 12 volt, a 12 volt distributor with the proper length drive tang will interchange. In addition, you will have to change to a civilian oil pump to mate with your New distributor shaft. M-37 distributors as well as the corresponding oil pump have an offset tang, (not centered), which prevents the distributor from being installed 180 degrees off Top Dead Center (TDC) on number one and number six cylinders.

Quick Tip 7: Flathead 6 Distributor Cap Sizes
Which distributor cap do I have?
A number of different distributors will interchange between flat head 6 cylinder engines as long as the engine block is of the same physical length. There are two (2) distinctly different diameter caps you will find on most distributors. (See the distributor cap photographs in the part listings on this page.) To determine which cap you need simply remove your distributor cap and check the locating notch that locks the cap into the top of the distributor. Most early model distributors use a larger diameter cap of 3 3/8" diameter and have a locating notch of just over 1" long in the top rim of the distributor housing. Later model distributors have 3 1/8" diameter caps with a locating notch of about 3/8" long. Checking these dimensions and having your distributor tag # when you call will help us to ensure you get the correct parts.

**The Complete 6 to 12 Volt Power-Vert Conversion Kit is now available**  
for all Dodge Trucks equipped with 218, 230 & Flathead 6 cylinder engines. We understand the importance of leaving your vehicle original, but at the same time, we also understand the need for a good trouble free charging system when your vehicle is in frequent use. The Power-Vert kit is strictly a bolt on kit that requires no modification. Simply unbolt your accessories and bolt the Power-Vert kit on. A few simple tools and a couple of hours are all that is required. You can box up your original parts and change back to your original system at any time.

The Power-Vert Conversion kit has these advantages:

- No cutting, drilling or modifying
- Retain your original gauges
- Uses your original fan belt
- No external voltage regulator required
- Retain your 6 volt starter for extra cranking power
- Superior charging system using alternator
- Faster charging rate at low R.P.M.
- No more bulky generators with hard to find expensive repair parts
- Inexpensive alternator parts available virtually anywhere
- We sell the complete kit with no retrofitting or parts to buy... except a battery
- No cutting or modifying wiring harness

- Rebuilt 12 volt alternator
- 12 Volt coil
- Coil resistor
- Alternator mounting brackets
- All 12 volt bulbs (minus WWII Taillight)
- 12 Volt horn
- 12 Volt to 6 Volt fuel gauge resistor (CC921257-R)
- Wiring diagram
- 90 day warranty on all parts
- Alternator wiring with/without covered wire

Not Included: 12 Volt heater motor  
(optional - additional charge)

**Quick Tip 9:**
Error in Assignment of Part Numbers in Parts Manuals:

After carefully researching The Mopar Parts List for Dodge Power Wagon 1947-53 & 1947-56, we have determined there was an error in part numbers listed for the Early Transmission Part #CC921869 (See sections 21-10-0, 21-11-0 on page 21-9). The Reverse Idler Gear; Low/Second Gear and 3rd/Direct Gear were assigned incorrect part numbers.

Corrected part numbers are as follows:

**Need Your Transmission Rebuilt?**

Our shop offers complete rebuilding services for Dodge Trucks equipped with New Process four-speed transmissions.

For transmissions w/casting #C3871, we have very few parts in stock so we recommend changing to the earlier style transmission, which is interchangeable without modification (except PTO).

**Quick Tip 10: Proper Drive Shaft Installation**

I am hearing a clunking noise coming from the drive shaft area -- what could this be?

One of the most commonly made mistakes in reinstalling drive shafts is having them out of phase. If you are having trouble with “clunking” U-joints, or U-joints wearing out quickly, be sure you check your shafts for this problem. The figure below shows a typical cross section of a prop shaft with universal joints. Note the alignment arrows on the splined yoke and the tubular prop shaft. When the arrows are not aligned, the splined yoke can be slipped over the prop shaft in any position so that the U-joints are not in alignment (or the same position), this creates a problem where the joints are working against each other.

The splined yoke can only be correct in 2 positions, (180 degrees) from each other. When reinstalling your prop shaft make sure that your pinion flange and transfer case flange (in the case of front and rear drive shafts) are in the same position. If the position is 90 degrees difference between the two, the end result will be U-joints “clunking”. Because of a build up of grease on your shafts, you may not be able to see the alignment arrows. If you remove the splined yoke from the shaft, make sure that when it is reassembled, the U-joint ends of the splined yoke and prop shaft are in the same position.

Quick Tip 11:
Differential Sizes & Gear Ratios

What is the gear ratio and diameter of my truck’s differential?
The older Dodge axle that uses the 5 hole Budd Wheel (1 1/2" lug nuts), came in (2) different ring gear diameters as well as (2) different gear ratios. Differential sizes and gear ratios are shown below, for various truck types. To determine the size of ring gear without disassembling your differential, just measure the diameter of your pinion seal.
- 3 1/2" diameter pinion seal = 8 3/4" diameter ring gear
  - 4" diameter pinion seal = 9 5/8" diameter ring gear
- Vehicle Type A: 1940-42 WC/1/2 ton 4x4
  - All: 8 3/4" diameter ring gear 4.88 Gear Ratio
- Vehicle Type B: 1942-45 WC 3/4 ton 4x4
  - Early: 8 3/4" diameter ring gear—5.83 Gear Ratio
  - Late: 9 5/8" diameter ring gear—5.83 Gear Ratio
- Vehicle Type C: 1943-45 WC 1 1/2 ton 6x6
  - All: 9 5/8" diameter ring gear 5.83 Gear Ratio
- Vehicle Type D: 1946-1971 1 ton
  - (Flat fender only) 4x4 Power Wagon
  - All: 9 5/8" diameter ring gear—5.83 Gear Ratio
  - standard—4.88 Gear Ratio (optional)
- Vehicle Types E & F: 1951-68 3/4 ton M-series
  - Dodge
  - All: 9 5/8" diameter ring gear—5.83 Gear Ratio

New Aftermarket Traditional Style 5-Hole 17" Wheel
Vehicle Type: A,B,C,D,E,F
New Aftermarket 17" wheel that will fit your Budd wheel pattern! These wheels are 17" x 8" with 7.5" backspacing and a .875" lug stud hole so they will be easier to center while mounting. They are made from a 17" wheel ring that is welded to a pressed, thicker center that differs from the factory original wheels. These wheels bear a very close resemblance to the original and will allow for more tire options than the original Budd wheels.

Part #CC1261521-N17 $535

CAUTION: USED SPLIT RINGS SHOULD BE PAIRED WITH THE ORIGINAL WHEEL THEY CAME OFF OF. SPLIT RIM WHEELS & RINGS CAN BE DANGEROUS AND REQUIRE CAREFUL INSPECTION AND MOUNTING PROCEDURES. SEE YOUR PROFESSIONAL.

TIRES, TUBES & FLAPS

CHOOSING YOUR TIRE
Three types of tires are available from Vintage Power Wagons — Two (2) Mud & Snow, and one (1) Military Non-directional, in various sizes and diameters to fit the different truck types. Please see the descriptions below for the correct tire(s) for your truck and application. IMPORTANT NOTE: These tire prices are valid as of Fall 2020. Rubber prices can fluctuate, so this price may not be current by the time you receive this catalog.

MUD & SNOW TIRES
Lots of driving, or driving in mud, snow, or ice? Choose the Mud & Snow type of tire. These are not the stock tires, but they do a better job of handling different road conditions.

Good for various driving conditions

MILITARY NON-DIRECTIONAL TIRE
Doing a restoration and want your truck to look like the original? Choose this tire. All military models, and the Type D civilian models, were originally issued with the Military Non-directional tires. These tires are excellent quality and have the correct look for a show truck. The Military Non-directional tires can handle some mud, but aren’t as good at maneuvering snow or ice as standard Mud & Snow tires.

Quick Tip 12: Checking Frame Alignment

How can I tell if the frame on my truck is straight and true?

To obtain diagonal measurements, (which are used to determine the “squareness” of the frame), the following procedures are recommended (while the body is on the truck):

Load the truck with a pay load which is near BUT NOT GREATER THAN the specified limits. Place the truck on a level floor and check for proper tire air pressure.

Suspend an ordinary surveyor’s “plumb bob” from the corresponding points on the frame, as indicated by the diagonal lines in the diagram. Place a chalk mark on the floor directly under the point of the “plumb bob”.

Move the truck away so that the distance between the chalk marks, on the floor, can be measured.

Then, referring to the diagram below, carefully measure the distance at the points made by diagonal line “A.” This should agree, within 1/4” inch, with the distance between the points connected by diagonal line “B.”

The same check should be made at points between the diagonals “C” and “D,” and “E” and “F.”

This is a quick method of determining which frame section is bent and also where force should be applied to make necessary corrections. See your tech manual for dimensions.

**Final Thoughts**

- Finally, a high quality exact reproduction of those hard-to-find running boards for your Civilian Power Wagon, WC 3/4 ton Ambulances and Carryalls. All are pre-punched with the correct mounting holes for a perfect fit. Edges are rolled like the original along with the raised stamped diamonds on the board surface. The great quality shows in the ends and the spot welding, a dead ringer to the original. All the curves and cutouts are in the correct places as well as the correct gauge steel. With a little paint, you won’t know the difference!

**New 1 Ton Flat Fender Non-Winch Lower Grille Guard**  
Vehicle Type: D (models without winch)  
Part #CC1095556-N $189

These new grilles were produced at a local metal fabrication shop that uses a CAD process. The outer frame was laser notched to give exact spacing for the bars.

*Our once plentiful stock of used non-winch lower grille sections has been depleted, but we are lucky to have a local manufacturer working with us on producing these new lower Flat Fender Power Wagon grilles. We are pleased to announce that these are now available, but quantities are limited.*

New M37/M43 Battery Box

Vehicle Type: E,F
Note: Each box and lid has a slight variation in dimensions and may require some manual persuasion and a few shop tools to fit properly.

These boxes are exclusively made in the USA for Vintage Power Wagons by a local company. There is a slight difference between the original boxes and the New ones when it comes to the construction. Different steps were taken to achieve the same overall form, so this box is not an exact replica, but a worthy replacement. In the original design, the side walls and upper lip were separate pieces welded together. Our box uses one piece for the side wall and upper lip to reduce labor & production time. The box lid, latch, and cable grommet assembly are sold separately and are readily available.

### How Do I Find The Braden Winch Part I Need?
We carry parts for 4 different winch types. If you know the model of winch, you’ll find multiple sections for that winch model on the next 3 catalog pages. If you don’t know your winch type, find your vehicle type with its ID letter in the right column of the chart. Match your vehicle’s ID letter with the Braden Winch Model in the left column.

Quick Tip 13: Winch Information

Your Braden Winch and what to check before using it.

Winch operation is potentially dangerous. If you are unfamiliar with how to use the winch, we suggest you read up on winch operation and/or get someone with winching experience to help you.

Ready to use your Braden Winch? The Braden Winch is a powerful tool and is generally overlooked when it comes to maintenance. For example, it is common to find that gear lube is low or non-existent. Many winches have been worked hard and only given attention when it was absolutely necessary. The list below will provide information on what you should check before you use your winch.

**Checking the winch:**

1. Check the winch **gearbox** for lube by removing the plug. Leaking seals and gaskets should be checked and replaced.
2. Check the **cable** carefully for frayed areas. Just because the cable is covered in grease doesn’t mean that the cable is in good condition. Make sure the cable is attached solidly to the drum and free of kinks.
3. Check to see if your **cable chain** is properly attached with cable clamps and thimbles or the proper clevis. Make sure you have at least 3 clamps at the end of the cable if you are using clamps.

4. Check your **de-clutch lever**. Whether you have an internal or external type, the de-clutch lever should be able to engage or disengage the sliding clutch smoothly.
5. Check the **Power Take-Off shaft universal joints** for tightness and the general condition of the yokes. Grease as necessary.
6. Check your **shear pin** and make sure you have some extras on hand when you’re using your winch. Bolts, especially grade 5 or 8, are not a good substitute for the shear pin, as the bolts are too hard. The shear pin is soft enough to break when the winch is overloaded. This ensures that there is no damage done to the internal components of the winch.
7. Check your **winch mounting brackets** and replace any that have been damaged by the cable. Also check for stressed or cracked brackets and hinder mounting bolts.
8. Remove the cover plate and check the wear on the **bronze winch worm gear**, and replace the gear if necessary. Excessively worn teeth can result in a complete winch failure. Disassembling and rebuilding your winch will save you time and money in the long run and will ensure the safe mechanical operation of your winch, when you most need it.

**Winch Lubrication**

Try substituting the 80/90-weight gear lube usually used in PTO winches with John Deere Corn Head Grease. Not only does this grease do a great job of lubricating the winch gears, its higher viscosity leaves no chance for dripping gear lube. (Corn Head grease also works well in steering boxes.)

Your Braden Winch is a great tool - take good care of it and it will most certainly take good care of you!

### New 1 Ton Flat Fender Non-Winch Lower Grille Guard

These new grilles were produced at a local metal fabrication shop that uses a CAD process. The outer frame was laser notched to give exact spacing for the bars.

Our once plentiful stock of used non-winch lower grille sections has been depleted, but we are lucky to have a local manufacturer working with us on producing these new lower Flat Fender Power Wagon grilles. We are pleased to announce that these are now available, but quantities are limited.

Edited and compiled by Dave Butler
This manual is the perfect body supplement you’ll need if you own a WWII Dodge closed cab. When we compiled this manual, we had intended it to be used for those who are working on a 1948 or later Dodge truck as a supplement to the Dodge Truck Shop Manuals. However, the closed cab WWII Dodges use the same basic cab design, and therefore the information in this manual applies to these trucks, as well. You will notice that the hood and front fenders pictured in this manual look different from yours, but the information still applies. Information from over 20 different manuals has been combined to provide you with the most comprehensive information on the closed cab body group section. This manual is a complete guide with diagrams, illustrations, photos and step-by-step instruction to removal, adjusting & straightening, replacing and installing fenders, doors & door mechanisms, running boards, radiator shell, windshield & wipers, tailgate and more. A section dedicated to welding is also included. Color cover. 24 pages. Item #NBK-376 $20

**WWII & CIVILIAN VIDEOS**

1. **Power Wagon Rally - The Early Years DVD**
Well over thirty years ago, the very first Vintage Power Wagons-sponsored Power Wagon Rally occurred. The rally was a big success and was filmed and made available to the Power Wagon world on VHS tape. The second rally was another big hit and was also documented in a similar manner. We’ve had some requests for the footage of these first rallies over the years but since we no longer have any VHS tapes available and most people have done away with the old VCR, we decided it was time to reformat these videos on a Newer form of media. This DVD features the first 2 Rallies with shots of great vehicles, fun events, and interviews with truck owners and participants. The aspect ratio has been changed to 16:9 from the original 4:3. The video is in color and both features have played a time of 58 minutes. Item #acc-123 $19.95 $10

2. **The Power Wagon Passion DVD**
Since World War II, the Dodge Power Wagon has held a special place in the hearts of Americans. Power Wagon Passion takes you to the Annual International Power Wagon Rally in Fairfield, Iowa to talk to aficionados about their ongoing love affair with the ‘Truck That Built America.’ 54 minutes (with bonus features) Item #acc-112 $17.95

3. **The Dodge Power Wagon DVD**
The full uncut version from 1950! See in full color, the story of the development of the Dodge Power Wagon. Great film footage of this famous truck hard at work on farms, ranches, reptile farms & even swamps, fighting forest fires, feeding cattle, pushing through snow, plowing/disking, planting and cutting wood and even some footage of the ranch house wife going to Safeway in the Power Wagon! Some fantastic scenes of brand New Dodge’s being put to the test, stuff you’ll never see anywhere else. Includes rare film clips on the testing of the World War II era WC 3/4 ton and 6x6. Unique footage showcasing the 3-point hitch, rear seat pulley and winch are included in this great, must-see film. Don’t miss it. 74 minutes, full color. Item #acc-109 $21

4. **Army on Wheels DVD**
Terrific original pre-World War II film produced by Chrysler Corporation. This one takes you to training maneuvers in the southern United States in the days leading up to World War II. Great action, featuring and complementing the grandfathers of the Dodge Power Wagon, the rare VC 1/2 ton series 4x4 and the larger 1 1/2 ton 4x4 VF. Excellent action scenes show many different military vehicles. Perfect for any World War II buff or anyone interested in early Dodge Trucks. 30 minutes, black & white. Item #acc-110 $21

5. **Dodge “Job Rated” Trucks DVD**
Dodge truck promotional film presents job-rating a truck to fit your business. Many excellent views of all sizes of Dodge trucks are shown along with factory scenes, testing and truck uses. Features some very interesting footage that was intended for Dodge Truck Dealers on how to sell the over 100 versions of W-series trucks available in 1946. Some laughable period sales tips are included as well as some great test footage from the Chrysler factory and proving ground, featuring winter testing on WC Dodge military trucks. 26 minutes, black & white. Item #acc-111 $21

6. **The Americans on D-Day DVD**
Join battlefield historian Ellwood von Sebold in his 1943 Dodge Command car as he takes you on a tour of the American D-Day landings in real time. Listen to the men who were there, land in Ste. Mere Eglise with the 82nd Airborne, scale the cliffs at La Pointe du Hoc with the Rangers, wade through the surf on Omaha Beach with the 29th Infantry Division and take the guns at Brecourt manor with Easy Company of the 506th Parachute Infantry Regiments. See the uniforms they wore, the weapons they fired and the equipment they carried. 44 minutes, full color. Item #acc-117 $23.95

A reproduction of a revised mid-’50’s driver’s manual to which we’ve added detailed serial number information and the years in which notable changes were made. If you own or like the civilian Power Wagon (models WDX, PW, WM300), then this manual is for you! It contains information that every owner needs-details on the winch, FTO, rear pulley, mechanical governor, early and late wiring diagrams, etc. The New Dodge Power Wagon Owner’s Manual is 5 1/2” x 8 1/2 in size (same as the original). 80 pages, 3 color cover. Item #RBK-375 $17

Edited and compiled by Dave Butler

You’ll need this supplement to go with your 1948 up to 1971 Service or Shop Manual for any model “flat fender” Power Wagon. (1948 & later body sections of Shop Manuals cover only 2 wheel drive body styles.) Information from over 20 different manuals has been combined to provide you with the most comprehensive collection on the body of the Dodge Power Wagon. Covers diagrams, illustrations, photos and step-by-step instruction to removal, adjusting & straightening, replacing and installing fenders, doors & door mechanisms, running boards, radiator shell, windshield & wipers, tailgate and welding.
