

## Fertiliser Choice Guide:

It can be tough choosing the right fertiliser especially when there is so many options out there hopefully the below information gives you a good idea of which one to pick. However, if you are unsure, please feel free to ask me. I am always happy to help with advice and information to ensure what we do is effective. We are also working hard in making more smaller size options available to help with any budget and any size lawn.

If your lawn is in good condition and doesn't have any bare patches that require filling in and overall, it is in good shape then a maintenance fertiliser like the below will be perfectly fine here. Products with a \* on them indicate they are great for low cut turf as well.

- Baileys 3.1.1 Granulated 25grams per sqm every 10-12 weeks
- Baileys 3.1.1 with added Grosorb 30 grams per sqm every 8 weeks\*
- Baileys Brilliance 25grams per sqm every 8 weeks\*
- Baileys Turfect Energy 30grams per sqm every 8 weeks\*
- Baileys SG Maintain 25grams per sqm every 10-12 weeks
- Eco Growth Eco Prime Emerald 25grams per sqm every 8 weeks
- Eco Growth Emerald Mini Prill 25grams per sqm every 8 weeks

If your lawn isn't quite there yet and needs some slight improvement the below fertiliser will help thicken the lawn out and fill in some small bare patches. It will also give a good overall health boost. These are also great fertilisers post Aeration and Vertimowing.

- Baileys SG Renovate 25grams per sqm every 8 weeks
- Eco Growth Eco prime Purple 25grams per sqm every 8 weeks

If your lawn is in need of a heavy repair where there isn't much coverage at all. Or we use the same fertiliser as a turf start for when a new lawn goes down then the below choices will suit this situation.

- Baileys Energy Maxx 30-50grams per sqm every 8 weeks
- Eco growth Eco Prime Red 25grams per sqm every 8 weeks

For Winter a normal granular fertiliser isn't as effective however there is one that is made to be used over Autumn and Winter it has been proven with great results over the cooler months

- Baileys 4.1.1 I'm using it at 15grams per sqm every 4 weeks or can go 25grams per sqm every 6-8 weeks.

If you are using a lot of foliar liquid fertilisers, then a fertiliser to compliment this is what is needed and covers the essentials not commonly in liquid fertilisers.

- Baileys SG Elite 20grams per sqm every 8 weeks
