

Our range of non-weatherproof panels provide high-quality and reliable engine monitoring.

Specially designed stainless steel enclosures provide mechanical protection and mounting options for indoor protected installations. With a range of panel options covering everything from basic engine protection panels, to the advanced irrigation control panels complete with engine run-down timer, you can be sure to find the right panel at the right price.

All panels in the NP range are supplied with a 3 metre wiring loom terminated with bare ends, and gauge capillaries of the same length. Wiring schematics are provided to assist with installation.
