

Dewatering Bag

East Coast Filter, Inc.'s Dewatering Bags are used to remove both Oils and Sediment from a body of water.

The Dewatering Bags are constructed out of a highly durable Geotextile that is designed to eliminate Hydrocarbons and sediment, while allowing the clean water to filter through the bag.

To use the Dewatering Bag, simply enter a hose through the entry point on the side of the bag and clamp it together. Pump the contaminated water into the bag and all contaminants will filter through the bag.
