

# BOXER BY ROCKET ESPRESSO

The Boxer is a quality machine with a small footprint, making this the perfect choice for a site where space is at a premium but not compromising on performance.

Internally the Boxer has a clever layout to still offer the features of a full-sized commercial machine including an oversized boiler, which will deliver effective temperature stability and efficient recovery during peak service.

Externally heavy duty cast alloy side panels provide a minimalistic and stunning aesthetic to the Boxer, a quality finish and perfect pairing not often found in the compact machine market, with incredible value for price.

## KEY FEATURES

- The Boxer offers the features of a full-sized commercial machine in a compact footprint
- Available in 1, 2 or 3 Group options
- Generously sized boiler to allow for temperature stability and high volumes of dry steam
- Hot water tempering valve to adjust temperatures for long black coffees
- Single group automatic backflush cycle
- Heavy duty, individually cast alloy side panels
- Shot timer standard
- High or low group option for drip tray
