

R9 BY ROCKET ESPRESSO

Featuring a stainless steel multi boiler system and saturated group heads, the R9 provides the anticipated levels of temperature stability so that the barista can control variables for development of coffee quality and flavour.

The low profile and ergonomic design of the R9 demonstrates Rockets considered layout for the barista. The drip tray acts as an extended work platform, with the smooth levers providing the perfect amount of tension when activated.

Each group head is PID controlled, and the temperature can be incrementally adjusted by +/- 0.1°C. The digital LED displays per group assist the barista with quality control by displaying data including shot timers and temperature reading for each group head.

KEY FEATURES

- Available in 2 or 3 Group models
- A stainless steel multi boiler system with fully saturated group head
- Featuring LED digital shot timers and group head temperature displays
- Ergonomic design with extended work platform, low profile, and steam levers
- Pressure Transducer technology for instant boiler pressure recovery to significantly increase steam power and recovery time
- Ergonomic design with extended work
- Stainless steel boilers
- Automatic backflush cycle
