

# REA BY ROCKET ESPRESSO

The focus for the REA is temperature stability and a quick recovery, this high-end heat exchange unit delivers consistent results in high demand settings. Handcrafted with a superior thermosyphon system, PID temperature control and E61 style group head, the REA achieves temperature stability and performance for optimum brewing.

Rocket Espresso have included pressure transducer technology for instant boiler pressure recovery, which will significantly increase steam power and recovery time for effective performance.

## KEY FEATURES

- Available in 2 or 3 Group Models
- The pressure transducer technology initiates quicker steam recovery
- E61 style group heads with optional pre-infusion system
- A generously dimensioned thermosyphon system for maximum temperature stability
- PID temperature control
- Hot water tempering valve, to adjust temperatures for long black coffee
- Automatic back flush cycle
