

AMERICAN BARBELL GYM BAR

DESCRIPTION:

The American Barbell Gym Bar has a shaft made from precision-grade alloy steel tested at 190K PSI tensile strength. This makes for a solid, durable training bar built for a range of lifts, including squats, bench press, deadlifts, rows and more. The entire construction is finished in hard chrome for added durability and features a high-quality, precise knurl pattern for an excellent grip.

Note: the knurling on the Gym Bar does not fully extend to the inner side of the collar.
