

AMERICAN BARBELL PRECISION TRAINING BAR

DESCRIPTION:

This is virtually the same barbell as our competition spec. Stainless Bearing Bar – just with a bushing system. The bar shaft is made from precision straightened stainless steel. The strength of the shaft is tested with every shipment of raw material to ensure we have a consistent 190,000 PSI tensile strength.

This attention to detail also allows for excellent whip and long-term performance of our bars. Stainless Steel offers superior corrosion resistance and can always be cleaned and repaired with no damage to the surface. Additionally, knurling set in stainless steel has a one-of-a-kind feeling that cannot be achieved with other finishes. The bar sleeves are precision welded to eliminate failure. The weld is recessed to not interfere with plates resting flush against the sleeve collar. Each sleeve is coated with hard chrome for protection against dropping. This is an ideal choice for those looking for a multi-purpose precision barbell that will last through the ages.

TECHNICAL SPECS

Product SKU: OB20-SS-IWF/OB15-SS-IWF

AMERICAN BARBELL PRECISION TRAINING BAR

Available Sizes:	15KG/20KG	System:	Bushing
Diameter:	25MM/28MM	Shaft:	Precision Straightened Stainless Steel
Length:	2010MM/2200MM	Sleeve Finish:	Hard chrome
Center knurl:	No	Application:	Weightlifting, Olympic Weightlifting
Loadable Sleeve Length:	12.598"/16.338"	Manufactured:	Made in USA
Tensile Strength:	190K	Warranty:	Limited Lifetime
