

GOTRAX

Installing the Cell Phone Holder

1 If you are using the cell phone holder on a GOTRAX electric scooter you will NOT need the two parts that have are circled in green. Those parts are for smaller handles that can be inserted in the ring of the holder for a tighter fit.

2 Open the cell phone case and place upside down on the handle. Use pressure to squeeze together and latch the silver and black hook in. This requires some force as the holder needs to be on nice and tight to avoid it from coming off while riding the scooter.

3 Twist and secure the latch to make it flush with the holder.

4 Turn the cell phone holder back around facing up.

5 Place your cell phone in the rubber grips and enjoy!
