Changing the Rear Fender

TOOLS REQUIRED: 2.5’ Hex Screw (Allen Wrench), 4’ Hex Screw (Allen Wrench)

STEP 1: Take the screw out with the 4’ Allen Wrench.

STEP 2: Pull out the wire.

STEP 3: Take the screws out on both sides using the 2.5’ Allen Wrench.

STEP 4: Take off the red plastic strip over and remove fender.

STEP 5: Replace it with the new Fender – Place the wire back into the opening and place the red plastic strip cover back on.

STEP 6: Feed the wire through.

STEP 7: Screw back in using the 2.5’ Allen Wrench.

BEFORE YOU RIDE: Be sure that the screw is tight so the Fender is secure and doesn’t move around.
