CHANGING YOUR HOVERBOARD'S BATTERY

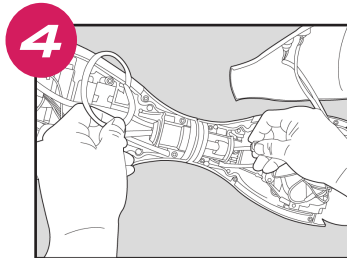

STEP 1: Flip over the hoverboard and unscrew all 8 screws (be sure to keep them in a safe place)

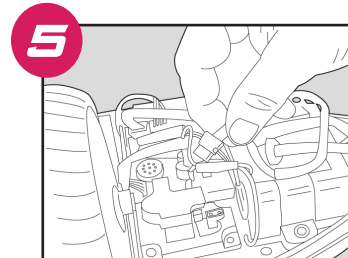

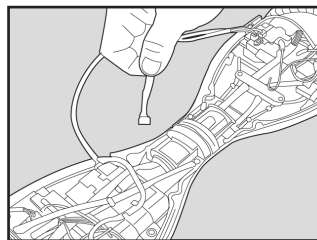

STEP 2: Carefully lay the covers down being careful to not remove the wires from the cover.

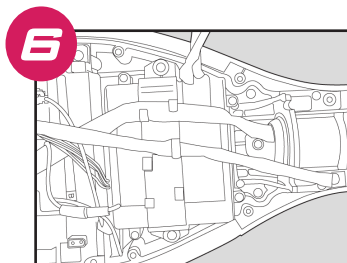

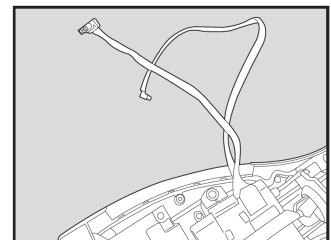

STEP 3: Unplug the cable with the yellow cap. (this is the side of the board that has the cable connected to the cap)

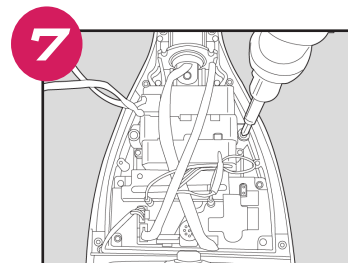

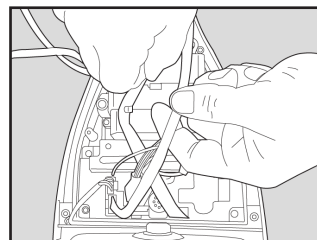

STEP 4: Pull the cable out from under the cover/case.

STEP 5: Now unplug the other cable with the yellow cap on the other side of the hoverboard. You will now have both cables with the yellow cap loose and out of the hoverboard.

STEP 6: The battery has cables clipped so that wires are not loose in the hoverboard. Unhook the cables from the clip on the battery.

STEP 7: Unscrew the metal bracket holding the battery in place. Once it is unscrewed you can now connect your new battery!
