Small-Scale, Quality Networking Deployment - Competitively Priced

Looking to deploy a small-height data or telco cabinet but need the advantages of a full-height cabinet but don't need a fitted fan tray?

The newly designed **ValuCab 12U and 15U floor-standing** cabinets are ideal for many installations that need all the advantages for full width, 19-inch racking, full depth, adjustable mount posts but does not include a fitted fan tray, thus keeping your costs to a minimum. Of course our other accessories including castors, jacking feet and M6 cage nuts and bolts.

With more networking, telco, PBX and broadcast equipment becoming more compact and of course thinking all installations do not require a high, towering 42U cabinet for example, the new ValuCab 12U and 15U range are ideal for IT rooms, PBX switching centres, SME business applications, but without the extra height clearance needed.

Superb-build quality of course is assured, multiple cable entries, together with left/right hinged safety-glass door as standard, together with a hard-wearing black, powder-coated finish and assembled here in the UK..

enclosures - power distribution - cabling

specifications:
