NAS Backup & Restoring

Fast ethernet networking for all your server applications

No fuss, cost-effective and a robust chassis is the new standard for fast ethernet rack-mount switching.

The new Dynamode **SW240010-R** is a fully compatible fast ethernet (100BaseTX) switch as you come to expect but with some added features to further enhance your fast ethernet network, be it at the office, on campus or in a server farm environment.

Featuring a newly developed ASIC processor means more efficient IP data routing, reducing latency and enhancing for your fast ethernet network, even when compared with your older fast ethernet switch.

Totally silent in operation with its low-energy, integral power supply, all housed in a aluminium 1U, 19-inch chassis which helps to mitigate external RF noise which can reduce efficient data transfers, a common issue with other vendor's rack-mount switches. Of course high-density fully shielded STP RJ45 ports are present as are full, at-a-glance LED panel showing instant traffic information.

specifications:

24-port Fast (100/10Mbps) ethernet switch

Supports full-duplex mode for 200Mbps per port*

Supports 802.3az Energy Efficient Ethernet

Enhanced ASIC core enables super-fast packet transfers

Store-and-forward packet routing for reduced CRCs

Mac size: 8K Packet Buffer: 2Mb store & forward

STP RJ45 ports with associated status LEDs

Robust 1U aluminium chassis with integral PSU

Supplied with rack-mount brackets (1 pair)

*depending on applications and hardware specifications

CE FC RoHS COMPLIANT

Windows 8 Compatible

Mac

Microsoft Windows Server System
