Ultra Fast Data Communication Hub Solutions

Running low on USB3 ports on your notebook or desktop? Need to connect multiple USB3 devices at any one time?

Introducing the new **USB3-HB-4PM** which builds upon the already successful range of Dynamode USB2 hubs over the past decade. Almost all computer systems have only a few SuperSpeed USB3 hubs and often users have multiple USB3 (and USB2) devices they may wish to connect simultaneously such as backup devices, video adapters, VR headsets and more besides.

Featuring 4 independent USB3 ports which are of course fully backward compatible with your existing USB2 devices. Ideal for anyone to quickly and easily add additional USB3 ports into almost any computer setup, independent of what operating system they are running of course.

Stylish, self-powered with its integral USB3 cable, the USB3-HB-4PM is ideal for your existing and next-generation USB3 devices.

specifications:

SuperSpeed USB3.0 - 4 data hub ports

Transfer data independently up to 5Gbps on all ports

Ideal for computers with only singular USB3.0 ports

Pocket-sized, take it anywhere your devices go

Ideal for notebooks, desktops, media centres and more

Compatible with all USB2.0 and USB3.0 peripherals

* Charging maybe dependent on your existing hardware
