

**TREEHUGGER – THE OTHER KIND**

sasta

*“We developed the 3HGR slings in Finland in co-operation with experienced hunters. Every detail has been carefully designed and tested. Not only did we challenge the traditional concept of the gun sling, we challenged the technology used to manufacture it. Every critical component of the product is manufactured by us, in Finland. Our mission is to provide Premium slings for hunters, who dare to venture into the true wilderness.”*

**- LAURI KAKKONEN, FOUNDER**

# THE ORIGINAL 3HGR

## **A VERSATILE GUN REST AND CARRYING SYSTEM**

Demanding conditions in the wilderness often require improvised shooting positions to get above the undergrowth or other obstacles. The 3HGR will enable you to use trees, poles, beams and other vertical objects for additional support. With the 3HGR it is possible to deliver an accurate shot from a variety of shooting positions, shoot upward or downward at steep angles, rapidly switch between targets and even shoot at moving targets.

## **BIPOD-COMPATIBLE**

The 3HGR is an excellent choice if, for example, the undergrowth, steep shooting angles, uneven or too soft substrate, such as deep snow, make the use of other supporting gear particularly challenging. The 3HGR also works perfectly with most bipod models by attaching them to the sling swivel stud located in the bottom of the gun rest. We have designed the 3HGR so that these utilization options compliment instead of compete with each other!

## **SHOULDER HARNESS – ADDITIONAL CARRYING COMFORT**

Everyone who has carried a rifle for more than a mile knows how hard it can get on your shoulder. You can easily transform the 3HGR into a harness that will distribute the weight of the gun across both shoulders and makes carrying the gun a lot more balanced and comfortable – just place the support strap over your other shoulder. The difference when compared with a traditional gun sling is phenomenal, especially with suppressed or heavy rifles.

## **SAFETY SLING – WHEN YOU TRULY NEED TO KEEP YOUR HANDS FREE**

Sometimes getting to the best hunting grounds may require overcoming natural obstacles and crossing rough terrain. In the most challenging situations, you can use the 3HGR as a safety sling. Using it as a safety sling means that your gun will stay steady, and safe, on your back at all times.

*Mounts to sling swivel stud – tool free installation!*

# 3HGR LIGHT HARNESS

## MORE THAN A GUN SLING

The 3HGR Light Harness is a natural evolution of the original product. The Light Harness has the same harness and safety sling features, in an even more compact package than the 3HGR. The Light Harness will keep the gun safely on your back, and makes carrying the gun a lot more comfortable.

## LIGHT HARNESS – EXTREMELY COMPACT, PACKED WITH FEATURES

The 3HGR Light Harness isn't bigger or heavier than a traditional gun sling – the difference can only be seen when it comes to features. The Light Harness does not include the gun rest, but you can use the loop between the support strap and gun sling to stabilize your aim – just like the complete 3HGR. On the other hand, the Light Harness is compatible with a wider variety of firearms and the design also allows muzzle down carrying. The Light Harness always includes sling swivels.

# 3HGR OVERBERGET

## JUST LIKE A NORMAL GUN SLING, ONLY BETTER

The 3HGR Overberget is the most traditional model of the 3HGR product family. However, we couldn't help adding a few extra features.

## QUICK LENGTH ADJUSTMENT

The Overberget is assembled from two separate straps connected by a ladderlock buckle. This allows you to quickly tighten the sling against your body if you need to keep your hands free.

3 HGR™

## THE OVERBERGET LOOP

Especially when carried muzzle down, it is possible to use the sling as Ching sling type gun rest. Just place your support hand through the loop, and tighten the sling against your elbow. The loop also provides a thumbhole where you can rest your hand while stalking in the woods.

# 3HGR DRIVEN

## THE PERFECT SLING FOR DRIVEN HUNTS

We modified our AR-style sling to fit the needs of a driven hunt. The sling is attached to the side of the buttstock, which enables you to rest your rifle on your chest while you're waiting for the game animal to come your way, and the shoulder padding provides extra comfort for your shoulder. Thanks to the additional sling length, the gun is instantly ready for shooting. It is also possible to quickly tighten the sling against your body if you need to keep your hands free in a hurry.

## AND THEN SOME...

Aside from being a great sling for driven hunts, the 3HGR Driven serves you well in a variety of different kind of hunts. It is possible to quickly tighten the sling against your body if you need your hands free while stalking deer in the woods or skiing in the arctic hills looking for willow grouse. When situation requires, your rifle or shotgun is ready for shooting in an instant.

# 3HGR RECON

## SIMPLE, RUGGED AND RELIABLE

Come hell or high water, or even ice, the design of the 3HGR Recon will not fail you. Aside from being impervious to all weather conditions, our high-quality webbing has a reduced IR-signature. Built using a fail-safe ladderlock construction, the sling allows for quick adjustment, and can handle both dirt and extreme temperatures. Thanks to the two-part construction you'll also have plenty of room for length adjustment. We can offer this sling in different colors and IR protection frequencies.
