

Nerve Plant

Level of Care: 🌿🌿🌿 | Fittonia Albivenis

Light: Originally from tropical forests, the Fittonia thrives if placed in a spot with bright but indirect sunlight. Make sure to avoid full, harsh sun.

Water: This plant will be very dramatic if thirsty, it will drop its leaves and play dead until you give it a good drink! Keep soil moist with weekly watering.

Location: Enjoys humidity so a great spot could be the bathroom or kitchen where it still has access to natural light. It is also perfect in terrariums!

Tips: Due to its love of humidity and moist soil, ensure it has good drainage, yellowing leaves means it has been over watered. Shrivelled leaves indicate a need for more humidity so give it a good mist every couple of days. Non-toxic!
