

Fabric Materials and Colour Options

Choose from three different fabric materials: Flex-DC and Easy-Clean Spangly and Standard Nylon. All lead aprons come with a soft nylon lining for additional comfort.

Flex-DC: Keeping you comfortable and flexible in your movements.

The Flex-DC fabric is a specifically formulated material unique to our manufacturer AmRay, which gives the wearer a lightweight flexible fabric that is hard-wearing and durable. Its flexible properties afford the wearer complete comfort and ease of movement, avoiding unwelcome bulging from bending, sitting or leaning. A polyurethane coating provides an easy-clean surface to avoid staining and provides high standards of hygiene.

Easy-Clean 'Spangly': Making it easier to keep your apron clean.

In addition to the Flex-DC features, the Spangly fabric contains an additional coating to create an easy-clean surface resistant to staining.

Standard Nylon

Nylon is a strong and lightweight fabric of high resilience which is easy to keep clean.
