

# Install SmarterMeter in 5 Easy Steps!

Installing SmarterMeter does NOT require you to unscrew or cut-off any electrical wires. The main step involves clamping a sensor on the exterior of the main power line. **If you are not confident in dealing with your home circuit box, we highly recommend that you seek the assistance of your local electrician / technician.**

## What's Inside

From left to right: SmarterMeter Unit, Clamp Current Sensor, Power Supply.

## Step 1. Open the Main Circuit Box

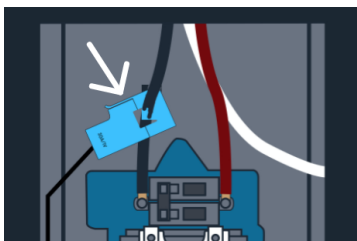

**Turn off the main switch** in your home circuit box for safety purposes. After which, open the breaker panel by removing the bolts attached on the corners and edges of the metal cover.

**⚠ Safety warning:** Once the circuit panel has been opened, be very careful not to touch any exposed metal wires!

## Step 2. Clamp the Current Sensor on the Main Powerline

Clamp the electrical current sensor on one of the electrical **main line wires**. Make sure to connect the ends of the sensor properly.

**Main line wires are the two thick wires** connected to the main breaker switch (the switch that turns off everything when flipped). If you see more than 2 main line wires, please contact SmarterMeter immediately.

### Step 3. Connect SmarterMeter to the Sensor

Connect the current sensor to SmarterMeter. The end of the current sensor should be properly connected to the SmarterMeter unit.

### Step 4. Mount and Power SmarterMeter

Mount the unit to your preferred location by peeling off the double edge tapes underneath the case. Close the breaker panel by putting the removed bolts into its original locations. Make sure to properly close the metal panel!

Turn on the main line switch.

Plug the power supply into a nearby socket or extension cord. Power on the SmarterMeter by connecting the power supply to the rectangular port located on the bottom of the case.

A **blinking green light** on the bottom will indicate that the unit is properly powered.

### Step 5. Connect SmarterMeter to your home WiFi

Hi there!

Please choose your WiFi from the list.

SSID\*

PLDTHOMEFIBR19260

Passphrase

Connect

Using any device (phone or laptop), check your WiFi list and connect to the SmarterMeter network.

SSID: **SmarterMeter**  
Password: **smartermeter**

Once connected to the network, a wifi connection portal should automatically appear (as shown on the left).

**?** *If the portal does not appear in one minute, you can **scan the QR code on the product box** or type **192.168.42.1** on the address bar of your browser*

In the connection portal, choose your home's Wifi connection in the list and input your WiFi password.

After submitting your WiFi credentials, restart SmarterMeter (unplug, then plug back in). If WiFi connection is successful, the "SmarterMeter" network will not appear in your WiFi list.
