

1. MTX Platform

Heavy-duty steel main support connects to 2" receivers, hauls up to 600 lbs. (272 kgs.), supports track/chock adjustability, and the attachment of innovative components.

2. EasyLoad Ramp

A longer webbed steel ramp reduces angle, maximizes traction, and eliminates bottoming out at the top of the ramp. Ramp hooks directly into tire track and will not disengage during loading.

3. WebGrip Track

Woven steel design secures rear tire sizes up to 8.5" (215 mm) wide with upgraded traction and adjusts up to a 65" (165 cm) wheelbase.

4. ZeroWobble Hitch Mount

Innovative bolt and nut assembly eliminate rack movement laterally in transport.

5. StableStop Chock Wide

Adjustable tire mount secures front tires up to 5" (125 mm), adds lateral support, and holds the bike upright while securing tie-downs.

6. BroadPull Arms

Wide tie-down arms optimize strap angles and improve leverage.
