

1. MTX Platform

Heavy-duty steel main support connects to 2" receivers, hauls up to 600 lbs. (272 kgs.), supports track/chock adjustability, and the attachment of innovative components.

2. EasyLoad Ramp

A longer webbed steel ramp reduces angle, maximizes traction, and eliminates bottoming out while loading. Ramp hooks directly into tire track and will not disengage during loading.

3. MaxHold HD Tracks

Adjustable laser cut track with improved geometry and reinforcements offers unrivaled wedging and grip to secure a range of oversized rear tire sizes up to 9" (229 mm) and adjusts up to a 62" (157 cm) wheelbase.

4. ZeroWobble+ Hitch Mount

Upgraded mount eliminates rack movement laterally in transport and requires fewer tools for installation.

5. StableStop Chock Wide

Adjustable tire mount secures front tires up to 5.5" (139 mm), adds lateral support, and holds the bike upright while securing tie-downs.

6. BroadPull+ Arms

Extended length tie-down arms expand strap angles and maximize leverage.
