

RACECRAFT

ELECTRIC SOUND CONTROLLED MUFFLERS

- All Mufflers are tested in FULL prior to shipping
- All Mufflers require a qualified Auto-Electrician to fit to the vehicle
- All Mufflers MUST be bench tested prior to installation in the exact desired setup that is being chosen. ALL Bolts need to be double checked.
- It is highly advised that an inline fuse is installed. (10AMP)

SINGLE MUFFLER SETUP

1. Power is fed from the vehicles supply **into** the Control Module
2. The control Module has 2 x pre-programmed Keyring Remotes. It is worth ensuring you see the **RED LED** when operating the button to ensure the batteries are ok.
3. The output of the control module is then plugged into the motor on the Muffler.
4. It is imperative you initially inspect all plugs (male and female ends) to ensure correct alignment & no foreign materials that would prevent a circuit.

SINGLE MUFFLER SETUP

**always check plugs are well aligned for use & clear of any foreign obstructions. Do not force plugs together.*

ALWAYS bench test the muffler prior to fitting

Ensure a qualified Auto-Electrician assists with installation.

TWIN MUFFLER SETUP

1. Please use the Y-Connecting Loom Supplied to run both Mufflers from one Control Box.
