

Clean Air Filter® Tractor, Combine and Sprayer Cab Filters

Unlike standard cab filters that have only a paper-like medium to trap dusts, our three-stage filter combines dust filter mediums (Stage 1) with activated charcoal (Stage 2), which absorbs pesticide and other organic vapors and traps pollen and molds. A final filter (Stage 3) reduces the amount of charcoal fines entering your cab, so you breathe cleaner air. Each filter is housed in a durable metal case and is designed to fit snugly in your tractor cab. Replace filters annually or when you begin to again taste or smell chemical vapors.

How to Order Your Filter: Identify your tractor or sprayer model from our updated and expanded list, cross check against our dimensions and manufacturer's part number and specify GEMPLER'S Item #.

Sprayer Filters: Chemical spray filters with activated carbon specifically for the cabs of sprayers. Featuring the same three-stage filtration process as the tractor and combine filters.
