

# FLOODSAX

## SANDBAG ALTERNATIVE

**FloodSax** are a clean, easy to store and fit alternative to sandbags for the protection of property from flooding. They are filled with a super-absorbent polymer which, when dry, lay flat and weigh only 200g. When they come into contact with water they can swell up to 20kg in three minutes and stay in this shape, and continue to be effective, for up to 3 months. They are biodegradable and have a storage life of 5 years. Suitable for any property that is at risk of flooding, they can be fitted in minutes. They remove the reliance on the supply of sandbags from local authorities and reduce the impact of a flood. FloodSax are supplied in 3 pack types:

**FloodSax Super:** this is recommended for locations with wide openings to form a large barrier. 5x per pack and each one measures 45cm x 50cm

**Floodsax Regular:** this is recommended for small openings and door fronts. 5x per pack and each one measures 45cm x 35cm.

**Floodsax Door:** for small openings and door front locations. This pack includes 1x strip version of the FloodSax, which measures 19cm x 90cm, and 4x Floodsax Regular.

FloodSax Door
