ACCESSORIES

Gravity nozzles are for use with pumped and gravity systems. They are for manual operation i.e. they will not shut off automatically when rising fuel level covers the end of the spout. They have an alloy construction with BSPF brass rotating hose connectors.

Automatic nozzles are for use with pumped systems only. They are for automatic operation i.e. they will shut off when the rising fuel level covers the end of the spout. Alloy construction, with BSPF brass rotating hose connector, partly encased in rubber to protect them from shocks and to improve grip and comfort.

N.B. Some cars will not accept these nozzles (please check with our sales department for guidance).

Rubber hose: high quality rubber “drop hose” which has excellent flexibility and kink resistance. Suitable for suction and delivery of diesel fuels and oils: available by the metre.

PVC hose: high quality PVC and nitrile hose reinforced with an embedded PVC spiral-helix. Good flexibility and kink resistance. Suitable for suction and delivery of diesel fuels and oils: available by the metre.

Hose kits comprise a manual nozzle, hose fittings, strainer and 5 metres of rubber “drop hose” that can be cut to the required suction and discharge length. Diesel hose kits in PVC are available on request.

The **UR** series diesel flow-meters are for use with pumps that have a flow range of 20 to 120 litres per minute or gravity fed systems that push down a minimum 20 litre per minute flow. These meters are equipped with either a 3-digit or 4-digit resettable batch register (with marked tenths), and a non-resettable totaliser.
