Technical Performance

- Chemically equivalent to traditional PET #1, but made with 30% bio-based materials
- Strong impact resistance and stellar clarity for demanding visual and medical applications
- Great oxygen and flavor barrier properties make it great for food packaging too
- Resists temperatures up to 65°C/130°F, just like traditional PET

Processing Characteristics

- Direct drop-in for PET, rPET and PLA
- No specialized production facilities or hand-wrangling required - works just like PET
- Fully recyclable with traditional PET even infrared and X-ray facilities can't tell the difference
- Compatible with RF die-cutting, coining and hinged applications

Environmental Details

- Eligible to be marked with PET #1 symbol for universal recycling programs
- Includes 30% renewable, plant-based content
- Contains no BPAs, phthalates or other Chemicals of Concern identified as potentially harmful to human health and the environment. Boom!
