Technical Performance

- Chemically equivalent to traditional PET #1, but made with 30% bio-based materials
- Strong impact resistance and stellar clarity for everyday packaging applications
- Great oxygen and flavor barrier properties keep packaging contents fresh and #unstinky
- Resists temperatures up to 65°C/130°F, just like traditional PET

Processing Characteristics

- Direct drop-in for PET, rPET and PLA
- No specialized production facilities or hand-wrangling required - works just like PET
- Regrind and recycled Bio-PET can be mixed with traditional PET - even infrared and X-ray can't tell the difference
- Compatible with RF die-cutting, coining and hinged applications

Environmental Details

- Eligible to be marked with PET #1 symbol for universal recycling programs
- Includes 30% renewable, plant-based content
- Combined with up to 50% recycled Bio-PET for a double bonus of renewable materials and maximum re-use
- Contains no BPAs, phthalates or other Chemicals of Concern identified as potentially harmful to human health and the environment
