

the step up

- TFF02005 -

Made from 99% bio-based materials and no nasty chemicals just like our workhorse, this sheet has a few extra sprinkles to survive sub-zero temperatures. Brrrr!

Technical Performance

- More impact resistance for die-cut packaging and freezer applications #winteriscoming ;-)
- Highly transparent with awesome clarity
- Great oxygen and flavor barrier properties keep packaging contents fresh
- Resists temperatures up to 45°C/113°F
- More rigidity and lower density than PET creates opportunity for material reductions through downgauging and yield improvement

Processing Characteristics

- Direct drop-in for PET, RPET, PVC and PS
- No specialized production facilities or hand-wrinking required - designed for existing extrusion and thermoforming equipment
- Lower processing temperatures means lower energy consumption during manufacturing, which means lower emissions. Score!
- Improved RF die-cutting, coining, perforation and hinging capabilities

Environmental Details

- Made with 99% annually renewable, bio-based materials per ASTM D6866 testing
- Free from BPAs, phthalates & other Chemicals of Concern identified as potentially harmful
- Up to 77% reduction in CO₂/GHG emissions¹
- Recyclable and compostable in commercial composting facilities

¹Cradle to gate CO₂ emissions estimated from Ingeo™ [Environmental Benefits Calculator](#)
